

# **Savitribai Phule Pune University**

(Formerly University of Pune)

## **Four Year Degree Program**

### **B.Sc.(Computer Science)**

**With**

**Major: Computer Science**

(Faculty of Science and Technology)

## **Syllabi for F.Y.B.Sc. (Computer Science)**

(For Colleges Affiliated to Savitribai Phule Pune University)

Choice Based Credit System (CBCS) Syllabus  
Under National Education Policy (NEP)  
**To be implemented from Academic Year 2024-2025**

**Title of the Course: B.Sc.(Computer Science)**

**Preamble:**

The B. Sc. (Computer Science) and B. Sc. (Computer Science) (Honors) and (Research) course is a systematically designed program with Computer Science as a major subject under the faculty of Science and Technology. The objective of the course is to prepare students to undertake careers involving problem solving using computer science and technologies, or to pursue advanced studies and research in computer science. The syllabus which comprises of Computer Science (Major) subject along with that of the three allied subjects (Mathematics, Electronics and Statistics) (Minor) covers the foundational aspects of computing sciences and also develops the requisite professional skills and problem solving abilities using computing sciences.

**Introduction:**

At the first year of under-graduation, the basic foundations of two important skills required for software development are laid. A course in problem solving and programming along with a course in database fundamentals forms the preliminary skill set for solving computational problems. The practical courses are designed to supplement the theoretical training in the year. Along with Computer Science (Major), VSC and SEC courses help in building a strong technical foundation. Another aspect of this course is IKS which tells about the rich heritage and advancement of India in the field of computation.

In the second year of under-graduation, computational problem solving skills are further strengthened by a course in Data structures, C++ and python programming. Software engineering concepts that are required for project design are also introduced. Essential concepts of computer networking are also introduced this year. The practical course included in both semesters complements the theory courses. Field projects/ OJT are introduced so that students can implement the concept they have learnt in first year.

*In Second Year, the "Subject 1 : Computer Science" will be the Major Subject and the Minor subject will be chosen from "Subject 2 or Subject 3". Subject 2 and Subject 3 will not be available as Major Subjects in Second Year and Third Year*

At the third year of under-graduation, all the subjects are designed to fulfill core Computer Science requirements as well as meet the needs of the software industry. Theory courses are adequately supplemented by hands-on practical courses. Major elective courses are taking care of recent advancement in the field of computer science. Minor and Skill Enhancement courses enable the students to acquire additional skills.

At the fourth year (honors) and (research) of under-graduation, all the subjects are designed to fulfill core Computer Science requirements as well as meet the needs of the software industry. Practical courses and field projects enable students to get hands-on training. Various learning tracks are open through Major elective courses. Research methodology course will create interest among the students to carry research in the field of computer science.

**Objectives:**

- To develop problem solving abilities using a computer.
- To build the necessary skill set and analytical abilities for developing computer based solutions for real life problems.
- To train students in professional skills related to the Software Industry.
- To prepare the necessary knowledge base for research and development in Computer Science.
- To help students build-up a successful career in Computer Science and to produce entrepreneurs who can innovate and develop software products.

### Eligibility

- a) H.S.C.(10 + 2) Science stream with Mathematics.
- b) Three years diploma course after S.S.C.(10<sup>th</sup> std.) of Board of Technical Education conducted by Government of Maharashtra or its equivalent.

### Programme Out comes:

| PO No | Outcomes                                                                                                                                             |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| PO1   | Develop creative skills, critical thinking, analytical skills and research to address the real world problems using computational skills             |
| PO2   | Understand and apply mathematical foundation, computing and domain knowledge and develop computing models for defined problems                       |
| PO3   | Understand software project management and computing principles with computing knowledge to manage projects in multidisciplinary environments        |
| PO4   | Illustrate the concepts of systems fundamentals, including architectures and organization, operating systems, networking and communication           |
| PO5   | Understand and apply the concepts of Digital Electronics, Computer Architecture, IoT etc.                                                            |
| PO6   | Recognize the need for and develop the ability to engage in continuous learning as a Computing professional                                          |
| PO7   | Apply modern computing tools, skills and techniques necessary for innovative software solutions                                                      |
| PO8   | Communicate effectively with the computing community as well as society by being able to comprehend effective documentations and presentations       |
| PO9   | Gain Self Discipline and commit Professional Ethics in global economic environment                                                                   |
| PO10  | Individual & Team Work: Ability to work as a member or leader in diverse teams in multidisciplinary environment                                      |
| PO11  | Identify opportunities, entrepreneurship vision and use innovative ideas to create value and wealth for the betterment of the individual and society |

\* The subjects offered to other faculty students under OE vertical are OE-151-CS-P/ OE-152-CS-T/OE-153-CS-P / OE-154-CS-T. The students of B.Sc. (Computer Science) will opt the subjects offered by other faculty given in University Basket.

**Exit option:** Award of UG Certificate in Major with 44 credits and an additional 4 credits core as per university guidelines OR Continue with Major and Minor  
Continue option: Student will select one subject among the ( subject 2 and subject 3) as minor and subject 1 will be major subject

In Second Year, the “Subject 1 : Computer Science” will be Major Subject and the Minor subject will be chosen from “Subject 2 or Subject 3”. Subject 2 and Subject 3 will not be available as Major Subjects in Second Year and Third Year

**Level:- 5.0 (Second Year) Sem:-III**

| <b>Prerequisites</b> <ul style="list-style-type: none"> <li>• Previous knowledge of any programming concepts is assumed.</li> <li>• Knowledge of mathematical operator.</li> <li>• Student think the out of box ie imagination power.</li> </ul>                                                                                                                                                                                                                                 |                     |                                                   |
| <b>Course Objectives.</b> <ul style="list-style-type: none"> <li>• Explore and develop the algorithmic approaches to problem solving.</li> <li>• Understand and implement modular programs using control structures and arrays in 'C'.</li> <li>• Implement programming logic and also test, debug and execute programs.</li> <li>• Implement Control the sequence of the program and give logical outputs.</li> </ul>                                                           |                     |                                                   |
| <b>Course Outcomes:-</b><br>On completion of this course, students will be able to: <ul style="list-style-type: none"> <li>• Explore and develop the algorithmic approaches to problem solving.</li> <li>• Understand and implement modular programs using control structures and arrays in 'C'.</li> <li>• Implement programming logic and also test, debug and execute programs.</li> <li>• Implement Control the sequence of the program and give logical outputs.</li> </ul> |                     |                                                   |

**Guidelines:**

**LabBook:** The lab book is to be used as a hands-on resource, reference and record of assignment submission and completion by the student. The lab book contains the set of assignments which the student must complete as a part of this course.

**Submission:**

**Problem Solving Assignments:**

The problem solving assignments are to be submitted by the student in the form of a journal containing individual assignment sheets. Each assignment includes the Assignment Title, Problem statement, Date of submission, Assessment date, Assessment grade and instructors sign.

**Programming Assignments:**

Programs should be done individually by the student in the respective login. The codes should be uploaded on either the local server, Moodle, Github or any open source LMS. Print-outs of the programs and output may be taken but not mandatory for assessment.

**Assessment:**

Continuous assessment of laboratory work is to be done based on overall performance and lab assignments performance of student. Each lab assignment assessment will be assigned grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include- timely completion, performance, innovation, efficient codes and good programming practices.

**Operating Environment:**

For 'C' Programming:

Operating system: Linux

Editor: Any linux based editor like vi, edit etc.

Compiler: cc or gcc

**LAB Course Contents****A) C Programming**

| <b>Assignment 1</b> | <b>Problem Solving Aspects</b>                                                                                                                                                                                                                                                                                                              |

| <b>Aims :</b> <ul style="list-style-type: none"> <li>● To give the students a sufficient knowledge fundamental principles ,methods and a clear perception of innumerable power of mathematical ideas and tools and know how to use them by modeling , solving and interpreting.</li> <li>● Reflecting the broad nature of the subject and developing mathematical tools for continuing further study in various fields of science.</li> <li>● Enhancing students' overall development and to equip them with mathematical modeling abilities, problem solving skills,</li> <li>● Creative talent and power of communication necessary for various kinds of employment.</li> <li>● Enabling students to develop a positive attitude towards mathematics as an interesting and valuable subject of study</li> <li>● To test, debug and execute programs.</li> </ul> |                     |                                                     |
| <b>Course Objectives</b> <ul style="list-style-type: none"> <li>● A student should be able to recall basic facts about mathematics and should be able to display knowledge of conventions such as notations , terminology and recognize basic geometrical figures and graphical displays, state important facts resulting from their studies.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                     |                                                     |

- A student should get a relational understanding of mathematical concepts and concerned structures, and should be able to follow the patterns involved, mathematical reasoning .
- A student should get adequate exposure to global and local concerns that explore them many aspects of Mathematical

### Course Outcomes

Upon successful completion of this course, the student will be able to:

- Work with graphs and identify certain parameters and properties of the given graphs.
- Perform certain algorithms, justify why these algorithms work, and give some estimates of the running times of these algorithms.
- Solve basic exercises of the type: given a graph with properties X, prove that the graph also has property Y.
- Develop an appreciation for the literature on the subject and be able to read and present results from the literature.
- Write cohesive and comprehensive solutions to exercises and be able to defend their arguments.

### Course Contents

| Chapter 1     | Matrices                                                  | 10 Hrs |
|---------------|-----------------------------------------------------------|--------|
| 1.1           | Matrix Operations                                         |        |
| 1.2           | Elementary Matrices, Elementary Row operations            |        |
| 1.3           | Row reduction and echelon forms                           |        |
| 1.4           | LU factorization of a matrix                              |        |
| Chapter 2     | Determinants                                              | 5 Hrs  |
| 2.1           | Introduction to determinants                              |        |
| 2.2           | Properties of determinants                                |        |
| 2.3           | Determinant by Row reduction                              |        |
| 2.4           | Determinant by Cofactor expansion along any row or column |        |
| Chapter 3     | Invertible matrices                                       | 5 Hrs  |
| 3.1           | 3.1 The inverse of a matrix                               |        |
| 3.2           | Characterization of invertible matrices                   |        |
| 3.3           | To find inverse of a matrix by Row reduction              |        |
|               | To find inverse of a matrix by Adjoint Method             |        |
| Chapter 4     | Linear Equations                                          | 10 Hrs |
| 3.1           | System of Linear equations                                |        |
| 3.2           | The matrix equation $Ax=b$                                |        |
| 3.3           | Gauss Elimination Method                                  |        |
| 3.4           | Cramer's rule                                             |        |
| 3.5           | Application of LU decomposition to solve system $Ax=b$    |        |
| <b>Books:</b> |                                                           |        |

**Text Book :** Linear Algebra and its Applications (5th Edition)

David C Lay, Steven R. Lay, Judi J. MacDonald

Pearson Publication, 2016

ISBN 978-0-321-98238-4

Unit 1: Sections 1.1, 1.2, 1.3.

Unit 2 : Sections 3.1, 3.2.

Unit 3 : Sections 2.1, 2.2, 2.3.

Unit 4: Sections 1.4, 1.5, 1.6, 3.3.

| <b>Course Objectives</b> <ul style="list-style-type: none"> <li>• To study different semiconductor diodes.</li> <li>• To understand applications of IC 555 as a multivibrator.</li> <li>• To study different applications of op-amp.</li> <li>• To understand applications of sensors</li> </ul> |                     |                                                     |
| <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>• Use different semiconductor diodes for various applications.</li> </ul>                                                                                                                                                          |                     |                                                     |

- Understand the different applications of FET, BJT and MOSFET.
- Use of different sensors for parameter measurement

## Course Contents

**Group A (Any 13)**

|     |                                                                                                              |
|-----|--------------------------------------------------------------------------------------------------------------|
| 1.  | Study of forward and reverse bias characteristics of PN junction diode.                                      |
| 2.  | To study the forward characteristics of LED for different colours                                            |
| 3.  | Study of Zener diode as a voltage regulator                                                                  |
| 4.  | Study of Optocoupler (mechanism and characteristics, Working principle of Light emitting diode, photo diode) |
| 5.  | Study of Transistor as a switch.                                                                             |
| 6.  | Study of Transistor as a switch.                                                                             |
| 7.  | Study of IC 555 as astable multivibrator used as square wave generator / clock                               |
| 8.  | Study of Digital to Analog Converter using R-2R ladder network                                               |
| 9.  | Study of optical sensor (LDR)                                                                                |
| 10. | Study of temperature sensor (LM35)                                                                           |
| 11. | Study of PIR sensor                                                                                          |
| 12. | Study of Study of Op amp as inverting/non-inverting amplifier                                                |
| 13. | Op Amp as a Unity gain follower                                                                              |
| 14. | Study of Op-amp as adder/subtractor                                                                          |
| 15. | Study of Flash ADC.                                                                                          |
| 16. | Study of Wein-bridge oscillator.                                                                             |
| 17. | Study of crystal oscillator                                                                                  |

**Group B: Activity (Any 1: Equivalent to 2 Practicals)**

1. Bipolar Junction Transistor (BJT) symbol, types, construction, working principle, Transistor. Amplifier configurations - CB, CC (only concept), CE configuration: input and output characteristics, Definition of  $\alpha$ ,  $\beta$  and  $\gamma$ , Concept of Biasing (numerical problems not expected), Identification of components (Passive and Active) and study of multimeter -
  - a. Minimum 10 different types of components are expected.
  - b. Identification based on visual inspection / data sheets.
  - c. Measure the various parameters using multimeter.
2. Technical survey of 5 electronic appliances used in different fields (Home, Hospital, Agriculture, Chemical industry, Automobile industry)

*(Note: basics of the devices will be explained in theory and practical will be based on applications of different types and configurations of the devices learnt in theory. In this way they will learn in class as well as in lab and more concepts can be covered in given number of credits.)*

**Suggested Readings/Material:**

1. Electronic Devices and Circuits I – T. L. Floyd- PHI Fifth Edition
2. Principles of Analog Electronics - A.P.Malvino
3. Sedha R.S., A Text Book Of Applied Electronics, S.Chand& CompanyLtd
4. Sensors and Transducers : D. Patranabis, PHI publication, 2nd Edition
5. Sensors and Transducers : Prof A.D.Shaligram
6. Op Amp and Linear Integrated Circuits: Ramakant Gaykwad

| Sr. No.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Title of the Experiment | No. of Experiments                                  |

|    |                                                                                                                                                                                                                                                                                                                                                         |   |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 1  | Tabulation and construction of frequency distribution. (Use of at least two data sets more than 50 observations- each for constructing frequency distribution)                                                                                                                                                                                          | 1 |
| 2  | Diagrammatic representation of statistical data using EXCEL and data interpretation. (problems like in Paper I of SET and NET examination and other competitive examinations). (simple bar diagram, subdivided bar diagram, multiple bar diagram, percentage bar diagram, pie diagram, spike plot for Likert scale ) Data interpretation from diagrams. | 1 |
| 3  | Graphical representation of statistical data: Histogram and frequency curve. Determination of mode graphically, Ogive curves and Pareto chart. Determination of median graphically. Data interpretation from graphs.                                                                                                                                    | 1 |
| 4  | Summary statistics – I: Computation of measures of central tendency for ungrouped data (AM, Median and Mode) using MS-Excel by regular formula method and using direct command. (Discuss use of an appropriate measure).                                                                                                                                | 1 |
| 5  | Summary statistics – II: Computation of measures of central tendency for grouped data (AM, Median and Mode) using MS-Excel by regular formula method and by direct command. (Discuss use of an appropriate measure).                                                                                                                                    | 1 |
| 6  | Summary statistics – III: Computation of measures of dispersion for ungrouped data (Range, quartiles, variance, standard deviation, coefficient of variation) using MS-Excel by regular formula method and by direct command. Use of an appropriate measure and interpretation of results                                                               | 1 |
| 7  | Summary statistics – IV: Computation of measures of dispersion for grouped data (Range, quartiles, variance, standard deviation, coefficient of variation using MS-Excel by regular formula method and by direct command. Use of an appropriate measure and interpretation of results.                                                                  | 1 |
| 8  | Computations of raw and central moments (not using the relation formula), measures of skewness and kurtosis (calculations in MS Excel by regular formula method and by direct command, using Karl Pearson's formula and moments). Use of an appropriate measure and interpretation of results.                                                          | 1 |
| 9  | Measures of Attributes (without MS Excel)                                                                                                                                                                                                                                                                                                               | 1 |
| 10 | Scatter diagram and computation of covariance and Karl Pearson's correlation coefficient (calculations in MS-Excel by regular formula method and by direct command). Use of an appropriate measure and interpretation of results.                                                                                                                       | 1 |

|    |                                                                                                                                                                                  |   |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 11 | Fitting of line of regression $Y = a + bX$ , calculations in MS-Excel by regular formula method and by direct command (use scatter plot for explaining the linear relationship). | 1 |
| 12 | Data Collection, its condensation and representation using MS-Excel.                                                                                                             | 1 |

Note:

1. Every practical is equivalent to four theory lectures per batch per week.
2. One hour is reserved for theory explanation of corresponding practical.
3. For project, a group of maximum 8 students be made. All the students in a group are given equal marks for project. Different data sets from primary or secondary sources may be collected.

# Semester II

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                     |                                                     |

| <b>Course Outcomes</b><br>On completion of the course, student will be able to : <ul style="list-style-type: none"> <li>Develop modular programs using function, pointers, arrays, strings and structures</li> <li>Design and develop solutions to real world problems using Advanced C programming.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                          |
| <b>Guidelines:</b><br><b>LabBook:</b> The lab book is to be used as a hands-on resource, reference and record of assignment submission and completion by the student. The lab book contains the set of assignments which the student must complete as a part of this course.<br><br><b>Submission:</b><br>Advanced 'C' Programming Assignments:<br>The problem solving assignments are to be submitted by the student in the form of a journal containing individual assignment sheets. Each assignment includes the Assignment Title, Problem statement, Date of submission, Assessment date, Assessment grade and instructors sign.<br><br>Programming Assignments:<br>Programs should be done individually by the student in the respective login. The codes should be uploaded on either the local server, Moodle, Github or any open source LMS. Print-outs of the programs and output may be taken but not mandatory for assessment.<br><br><b>Assessment:</b><br>Continuous assessment of laboratory work is to be done based on overall performance and lab assignments performance of student. Each lab assignment assessment will be assigned grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include- timely completion, performance, innovation, efficient codes and good programming practices.<br><br><b>Operating Environment:</b><br>For Advanced 'C' Programming:<br>Operating system: Linux<br>Editor: Any linux based editor like vi, gedit etc.<br>Compiler: cc or gcc |                                          |
| <b>LAB Course Contents</b><br><b>Advance C Programming</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                          |
| <b>Assignment 1</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Pointers : Operations on pointers</b> |

| <b>Aims :</b> <ul style="list-style-type: none"> <li>To give the students a sufficient knowledge fundamental principles ,methods and a clear perception of innumerous power of mathematical ideas and tools and know how to use them by modeling , solving and interpreting.</li> <li>Reflecting the broad nature of the subject and developing mathematical tools for continuing further study in various fields of science.</li> <li>Enhancing students' overall development and to equip them with mathematical modeling abilities, problem solving skills,</li> <li>Creative talent and power of communication necessary for various kinds of employment.</li> <li>Enabling students to develop a positive attitude towards mathematics as an interesting and valuable subject of study</li> </ul> |                     |                                                     |

- To test, debug and execute programs.

### Course Objectives

- A student should be able to recall basic facts about mathematics and should be able to display knowledge of conventions such as notations, terminology and recognize basic geometrical figures and graphical displays, state important facts resulting from their studies.
- A student should get a relational understanding of mathematical concepts and concerned structures, and should be able to follow the patterns involved, mathematical reasoning.
- A student should get adequate exposure to global and local concerns that explore them many aspects of Mathematical

### Course Outcomes

Upon successful completion of this course, the student will be able to:

- Work with graphs and identify certain parameters and properties of the given graphs.
- Perform certain algorithms, justify why these algorithms work, and give some estimates of the running times of these algorithms.
- Solve basic exercises of the type: given a graph with properties X, prove that the graph also has property Y.
- Develop an appreciation for the literature on the subject and be able to read and present results from the literature.
- Write cohesive and comprehensive solutions to exercises and be able to defend their arguments.

| Assignment 1                                                                                                                                                                          | Using networkx from python do the following |                                                   |
| 1.Generate graph G with vertex(node) set {1,2,3,4,5} and the edge set {(1,5), (1,3),(1,2),(2,3),(2,4), (3,4), (4,5)} . Draw graph G.                                                  |                                             |                                                   |
| 2. Generate graph G1 with vertex set { 'a','b','c','d'} and the edge set {x=('a', 'd'), y=('b','c'), z=( 'b','d'), w =( 'a','c')}. Draw graph G1 showing labeled vertices and edges.  |                                             |                                                   |
| 3. Generate graph G2 with vertex set {1,2,3,4,5} and edge set {(4,5),(5,3), (2, 2),(2,3),(2,4), (3,4), (1,5)} . Draw graph G2 with vertices in red colour and edges in green.         |                                             |                                                   |
| 4. Find the number of vertices, number of edges and degrees of all vertices in above graphs.                                                                                          |                                             |                                                   |
| 5. Verify Hand shaking lemma for above graphs.                                                                                                                                        |                                             |                                                   |
| Assignment 2                                                                                                                                                                          | Using networkx from python do the following |                                                   |
| 1. Draw a regular graph on 4 vertices with degree 2.                                                                                                                                  |                                             |                                                   |
| 2. Draw a regular graph on 5 vertices with degree 3.                                                                                                                                  |                                             |                                                   |
| 3. Draw the star graphs on 4, 7 and 8 vertices                                                                                                                                        |                                             |                                                   |
| 4. Draw the Petersen graph . Determine whether G is 2_regular. Is it 3_regular graph?                                                                                                 |                                             |                                                   |
| 5. Find adjacency matrix and incidence matrix of each of above graphs. Find the number of vertices, number of edges and degrees of all vertices in above graphs                       |                                             |                                                   |
| Assignment 3                                                                                                                                                                          | Using networkx from python do the following |                                                   |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                    |

- To learn different number system and their inter conversion.
- To understand logic gates and their applications.
- To study rules and laws of Boolean Algebra.
- To understand design of combinational circuit and their different types.

### Course Outcomes

- 1. To learn different number system and their inter conversion.
- 2. To understand logic gates and their applications.
- 3. To study rules and laws of Boolean Algebra.
- 4. To underst and design of combinational circuit and their different types..

### Course Contents

| Chapter 1                                                                                                                                                                                                                                                                                                                                                                                                                           | Number Systems and Digital Codes | 07 Hrs |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|--------|
| Introduction to decimal, binary, octal and hexadecimal number system and their inter-conversions, the concept of 1's and 2's complements, binary addition, binary subtraction using 1's and 2's complements. BCD code, Excess-3 code, Gray code and ASCII code.                                                                                                                                                                     |                                  |        |
| Chapter 2                                                                                                                                                                                                                                                                                                                                                                                                                           | Logic Gates                      | 03 Hrs |
| Logic gates – basic and derived (symbol, Boolean equation and truth table), concept of universal gates.                                                                                                                                                                                                                                                                                                                             |                                  |        |
| Chapter 3                                                                                                                                                                                                                                                                                                                                                                                                                           | Logic Families                   | 04 Hrs |
| Introduction of CMOS and TTL logic families. Parameters of logic families: voltage levels, propagation delay, noise margin, fan in, fan out, power dissipation Comparison between CMOS and TTL logic families.                                                                                                                                                                                                                      |                                  |        |
| Chapter 4                                                                                                                                                                                                                                                                                                                                                                                                                           | Boolean Algebra                  | 05 Hrs |
| Laws of Boolean Algebra, De-Morgan's theorems, simplification of logic equations using Boolean algebra, minterms, maxterms, Boolean expression in SOP and POS form, conversion of SOP/POS expression to its standard SOP/POS form.                                                                                                                                                                                                  |                                  |        |
| Chapter 5                                                                                                                                                                                                                                                                                                                                                                                                                           | Introduction to Karnaugh Map     | 05 Hrs |
| Introduction to Karnaugh map, problems based on SOP (up to 4 variables), digital designing using K-map for 3-bit gray to binary and binary to gray conversion. Ex-OR gate as a 4-bit Parity Checker and Generator.                                                                                                                                                                                                                  |                                  |        |
| Chapter 6                                                                                                                                                                                                                                                                                                                                                                                                                           | Combinational Circuits           | 05 Hrs |
| Introduction to Arithmetic Circuits, half adder, full adder, half subtractor, full subtractor, four-bit parallel adder, universal adder / subtractor, digital comparator, introduction to ALU. Introduction, Multiplexer (2:1, 4:1), demultiplexer (1:2, 1:4) and their applications. Encoders: decimal to BCD/binary, 3x4 matrix keyboard encoder and priority encoder. Decoders: BCD to decimal and BCD to seven segment decoder. |                                  |        |
| Reference Books:                                                                                                                                                                                                                                                                                                                                                                                                                    |                                  |        |

|    |                                                                                                                                                                                                                                                                                                              |   |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 1  | Fitting of second-degree curve $Y = a + bX + cX^2$ using MS-Excel.<br>(Use of scatter plot for explaining the nonlinear relationship between two variables)                                                                                                                                                  | 1 |
| 2  | Fitting of exponential curve of type $Y = ab^x$ , $Y = aX^b$ using MS-Excel.<br>(Use of scatter plot for explaining the nonlinear relationship between two variables)                                                                                                                                        | 1 |
| 3  | Time Series- Estimation of trend by using the method of moving averages by using regular formula method and by using MS-Excel.                                                                                                                                                                               | 1 |
| 4  | Time Series- Estimation of trend by using exponential smoothing by regular formula and by using MS-Excel.                                                                                                                                                                                                    | 1 |
| 5  | Problems on probability theory ( $P(A \cup B)$ , $P(A' \cup B')$ , $P(A' \cap B)$ , $P(A' \cap B')$ ) Use Venn diagram whenever possible.                                                                                                                                                                    | 1 |
| 6  | Computation of probability values for Normal distribution and Chi-square distribution using MS Excel command.                                                                                                                                                                                                | 1 |
| 7  | Computation of probability values for t distribution and F distribution using MS Excel command.                                                                                                                                                                                                              | 1 |
| 8  | Test for means and proportion (Z-test)<br>i) $H_0: \mu = \mu_0$ vs $H_1: \mu \neq / > / < \mu_0$ , $\sigma^2$ known<br>ii) $H_0: \mu_1 = \mu_2$ vs $H_1: \mu_1 \neq / > / < \mu_2$ , $\sigma^2$ known<br>iii) $H_0: P = P_0$ vs $H_1: P \neq / > / < P_0$<br>$H_0: P_1 = P_2$ vs $H_1: P_1 \neq / > / < P_2$ | 1 |
| 9  | Test based on students t<br>i) $H_0: \mu = \mu_0$ vs $H_1: \mu \neq / > / < \mu_0$ , $\sigma^2$ unknown<br>ii) $H_0: \mu_1 = \mu_2$ vs $H_1: \mu_1 \neq / > / < \mu_2$ , $\sigma^2$ unknown<br>iii) Paired t-test                                                                                            | 1 |
| 10 | Test based on $\chi^2$<br>i) Goodness of fit<br>ii) Independence of attributes (2 x 2).<br>iii) Independence of attributes (2 x 3 or 3 x 2 or 3 x 3)                                                                                                                                                         | 1 |
| 11 | Tests based on F-distribution<br>i) $H_0: \sigma_1^2 = \sigma_2^2$ vs $H_1: \sigma_1^2 \neq / > / < \sigma_2^2$ , means known<br>ii) $H_0: \sigma_1^2 = \sigma_2^2$ vs $H_1: \sigma_1^2 \neq / > / < \sigma_2^2$ , means unknown                                                                             | 1 |
| 12 | Project (Part-II) - Analysis of data collected in semester-I                                                                                                                                                                                                                                                 | 1 |

*Note: 1. Every practical is equivalent to four theory lectures per batch per week 2. One hour is reserved for theory explanation of corresponding practical. 3. For project, a group of maximum 8 students be made. All the students in a group are given equal marks for project. Different data sets from primary or secondary sources may be collected.*

**BOS: Banking, Finance and Insurance**  
**FY Semester-II**  
**Subject: Retail Insurance, Paper-II**

| Subject Code | Type of Course | Name of the Subject        | Credits | Lectures per Week in Clock Hour |
|--------------|----------------|----------------------------|---------|---------------------------------|
| OE160COM     | GE / OE        | Retail Insurance, Paper-II | 2       | 2                               |

**Course Objectives:**

1. To acquaint students with the concepts of insurance.
2. To cultivate awareness regarding the basic knowledge of the insurance sector.
3. To discern the disparity between Life and General Insurance.

| Unit     | Title and Contents                                                                                                                                                                                                                                                                                                                                                                     | No. of Lectures in Clock Hours |

# **Savitribai Phule Pune University**

**(Formerly University of Pune)**

## **Value Education Course (VEC)**

**Syllabus for F.Y.B.Sc. Students**

**(As Per National Education Policy-2020)**

**For Colleges Affiliated to Savitribai Phule Pune University**

**To be implemented from Academic Year 2024-2025**

# VEC-101-T: Environment Education-I

Course type: VEC (Theory)

No. of Credits: 2

Semester : I

## Course Outcomes

After the completion of this course, student will be able to-

CO-1: describe how human activities impact the environment.

CO-2: explain principles of sustainable development and resource management.

CO-3: analyze local, regional, and global environmental issues and their effects.

CO-4: evaluate different strategies for conserving biodiversity and ecosystems.

CO-5: apply relevant environmental policies and ethical considerations to real-world scenarios.

CO-6: design and implement action plans for community-based environmental projects.

## Course Content

### Chapter 1: Humans and the Environment

[06 hours]

**The man-environment interaction:** Humans as hunter-gatherers; Mastery of fire; Origin of agriculture; Emergence of city-states; Great ancient civilizations and the environment; Middle Ages and Renaissance; Industrial revolution and its impact on the environment; Population growth and natural resource exploitation; Global environmental change.

**The emergence of environmentalism:** Anthropocentric and eco-centric perspectives (Major thinkers); The Club of Rome- Limits to Growth; UN Conference on Human Environment 1972; World Commission on Environment and Development and the concept of sustainable development; Rio Summit and subsequent international efforts.

#### Suggested Readings

1. Fisher, Michael H. (2018) An Environmental History of India- From Earliest Times to the Twenty-First Century, Cambridge University Press.
2. Headrick, Daniel R. (2020) Humans versus Nature- A Global Environmental History, Oxford University Press.
3. Hughes, J. Donald (2009) An Environmental History of the World- Humankind's Changing Role in the Community of Life, 2nd Edition. Routledge.
4. Perman, R., Ma, Y., McGilvray, J., and Common, M. (2003) Natural Resource and Environmental Economics. Pearson Education.
5. Simmons, I. G. (2008). Global Environmental History: 10,000 BC to AD 2000. Edinburgh University Press

### Chapter 2: Natural Resources and Sustainable Development

[08 hours]

**Overview of natural resources:** Definition of resource; Classification of natural resources- biotic and abiotic, renewable and non-renewable.

**Biotic resources:** Major type of biotic resources- forests, grasslands, wetlands, wildlife and aquatic (fresh water and marine); Microbes as a resource; Status and challenges.

**Water resources:** Types of water resources- fresh water and marine resources; Availability and use of water resources; Environmental impact of over-exploitation, issues and challenges; Water scarcity and stress; Conflicts over water.

**Soil and mineral resources:** Important minerals; Mineral exploitation; Environmental problems due to extraction of minerals and use; Soil as a resource and its degradation.

**Energy resources:** Sources of energy and their classification, renewable and non-renewable sources of energy; Conventional energy sources- coal, oil, natural gas, nuclear energy; Non-conventional energy sources- solar, wind, tidal, hydro, wave, ocean thermal, geothermal, biomass, hydrogen and fuel cells; Implications of energy use on the environment.

**Introduction to sustainable development:** Sustainable Development Goals (SDGs)- targets and indicators, challenges and strategies for SDGs.

### **Suggested Readings**

1. Chiras, D. D and Reganold, J. P. (2010). Natural Resource Conservation: Management for a Sustainable Future. 10th edition, Upper Saddle River, N. J. Benjamin/Cummins/Pearson.
2. John W. Twidell and Anthony D. (2015). Renewable Energy Sources, 3rd Edition, Weir Publisher (ELBS)
3. William P. Cunningham and Mary A. (2015) Cunningham Environmental Science: A Global Concern, Publisher (Mc-Graw Hill, USA)
4. Gilbert M. Masters and W. P. (2008). An Introduction to Environmental Engineering and Science, Ela Publisher (Pearson)
5. Singh, J.S., Singh, S.P. & Gupta, S.R. 2006. Ecology, Environment and Resource Conservation. Anamaya Publications <https://sdgs.un.org/goals>

### **Chapter 3: Environmental Issues: Local, Regional and Global**

**[08 hours]**

**Environmental issues and scales:** Concepts of micro-, meso-, synoptic and planetary scales; Temporal and spatial extents of local, regional, and global phenomena.

**Pollution:** Impact of sectoral processes on Environment, Types of Pollution- air, noise, water, soil, municipal solid waste, hazardous waste; Transboundary air pollution; Acid rain; Smog.

**Land use and Land cover change:** land degradation, deforestation, desertification, urbanization. Biodiversity loss: past and current trends, impact.

**Global change:** Ozone layer depletion; Climate change.

### **Suggested Readings**

1. Harper, Charles L. (2017) Environment and Society, Human Perspectives on Environmental Issues 6th Edition. Routledge.
2. Harris, Frances (2012) Global Environmental Issues, 2nd Edition. Wiley- Blackwell.
3. William P. Cunningham and Mary A. (2015). Cunningham Environmental Science: A global concern, Publisher (Mc-Graw Hill, USA)
4. Manahan, S.E. (2022). Environmental Chemistry (11th ed.). CRC Press. <https://doi.org/10.1201/9781003096238>
5. Rajagopalan, R. (2011). Environmental Studies: From Crisis to Cure. India: Oxford University Press.

## **Chapter 4: Conservation of Biodiversity and Ecosystems**

**[08 hours]**

**Biodiversity and its distribution:** Biodiversity as a natural resource; Levels and types of biodiversity; Biodiversity in India and the world; Biodiversity hotspots; Species and ecosystem threat categories.

**Ecosystems and ecosystem services:** Major ecosystem types in India and their basic characteristics- forests, wetlands, grasslands, agriculture, coastal and marine; Ecosystem services- classification and their significance.

**Threats to biodiversity and ecosystems:** Land use and land cover change; Commercial exploitation of species; Invasive species; Fire, disasters and climate change.

**Major conservation policies:** in-situ and ex-situ conservation approaches; Major protected areas; National and International Instruments for biodiversity conservation; the role of traditional knowledge, community-based conservation; Gender and conservation.

### **Suggested Readings**

1. Bawa, K.S., Oomen, M.A. and Primack, R. (2011) Conservation Biology: A Primer for South Asia. Universities Press.
2. Sinha, N. (2020) Wild and Wilful. Harper Collins, India.
3. Varghese, Anita, Oommen, Meera Anna, Paul, Mridula Mary, Nath, Snehlata (Editors) (2022) Conservation through Sustainable Use: Lessons from India. Routledge.
4. Bhagwat, Shonil (Editor) (2018) Conservation and Development in India: Reimagining Wilderness, Earthscan Conservation and Development, Routledge.
5. Krishnamurthy, K.V. (2003) Textbook of Biodiversity, Science Publishers, Plymouth, UK

# VEC-151-T: Environment Education-II

Course type: VEC (Theory)

No. of Credits: 2

Semester : II

## Course Outcomes

After the completion of this course, student will be able to-

CO-1: identify various types of environmental pollution and their impacts on health.

CO-2: explain the basic concepts of climate change, including its causes and effects.

CO-3: analyze different strategies for adapting to and mitigating the effects of climate change.

CO-4: evaluate various environmental management practices and their effectiveness.

CO-5: apply the principles of key environmental treaties and legislation to case studies.

CO-6: create action plans that address specific environmental issues based on current policies and management practices.

## Course Content

### Chapter 1: Environmental Pollution and Health

[08 hours]

**Understanding pollution:** Production processes and generation of wastes; Assimilative capacity of the environment; Definition of pollution; Point sources and non-point sources of pollution.

**Air pollution:** Sources of air pollution; Primary and secondary pollutants; Criteria pollutants- carbon monoxide, lead, nitrogen oxides, ground-level ozone, particulate matter and sulphur dioxide; Other important air pollutants- Volatile Organic compounds (VOCs), Peroxyacetyl Nitrate (PAN), Polycyclic aromatic hydrocarbons (PAHs) and Persistent organic pollutants (POPs); Indoor air pollution; Adverse health impacts of air pollutants; National Ambient Air Quality Standards.

**Water pollution:** Sources of water pollution; River, lake and marine pollution, groundwater pollution; water quality Water quality parameters and standards; adverse health impacts of water pollution on human and aquatic life.

**Soil pollution and solid waste:** Soil pollutants and their sources; Solid and hazardous waste; Impact on human health.

**Noise pollution:** Definition of noise; Unit of measurement of noise pollution; Sources of noise pollution; Noise standards; adverse impacts of noise on human health.

**Thermal and Radioactive pollution:** Sources and impact on human health and ecosystems.

### Suggested Readings

1. Jackson, A. R., & Jackson, J. M. (2000). Environmental Science: The Natural Environment and Human Impact. Pearson Education.

2. Masters, G. M., & Ela, W. P. (2008). Introduction to environmental engineering and science (No.60457). Englewood Cliffs, NJ: Prentice Hall.
3. Miller, G. T., & Spoolman, S. (2015) Environmental Science. Cengage Learning.
4. Central Pollution Control Board Web page for various pollution standards.  
<https://cpcb.nic.in/standards/>
5. Ahluwalia, V. K. (2015). Environmental Pollution, and Health. The Energy and Resources Institute (TERI).

## **Chapter 2: Climate Change: Impacts, Adaptation and Mitigation** **[06 hours]**

**Understanding climate change:** Natural variations in climate; Structure of atmosphere; Anthropogenic climate change from greenhouse gas emissions– past, present and future; Projections of global climate change with special reference to temperature, rainfall, climate variability and extreme events; Importance of 1.5 °C and 2.0 °C limits to global warming; Climate change projections for the Indian sub-continent.

**Impacts, vulnerability and adaptation to climate change:** Observed impacts of climate change on ocean and land systems; Sea level rise, changes in marine and coastal ecosystems; Impacts on forests and natural ecosystems; Impacts on animal species, agriculture, health, urban infrastructure; the concept of vulnerability and its assessment; Adaptation vs. resilience; Climate-resilient development; Indigenous knowledge for adaptation to climate change.

**Mitigation of climate change:** Synergies between adaptation and mitigation measures; Green House Gas (GHG) reduction vs. sink enhancement; Concept of carbon intensity, energy intensity and carbon neutrality; National and international policy instruments for mitigation, decarbonizing pathways and net zero targets for the future; Energy efficiency measures; Renewable energy sources; Carbon capture and storage, National climate action plan and Intended Nationally Determined Contributions (INDCs); Climate justice.

### **Suggested Readings**

1. Pittock, Barrie (2009) Climate Change: The Science, Impacts and Solutions. 2nd Edition. Routledge.
2. [www.ipcc.org/](http://www.ipcc.org/); <https://www.ipcc.ch/report/sixth-assessment-report-cycle/>.
3. Adenle A., Azadi H., Arbiol J. (2015). Global assessment of technological innovation for climate change adaptation and mitigation in developing world, Journal of Environmental Management, 161 (15): 261-275.
4. Barnett, J. & S. O'Neill (2010). Maladaptation. Global Environmental Change—Human and Policy Dimensions 20: 211–213.
5. Berrang-Ford, L., J.D. Ford & J. Paterson (2011). Are we adapting to climate change ? Global Environmental Change—Human and Policy Dimensions 21: 25-33.

### Chapter 3: Environmental Management

[06 hours]

**Introduction to environmental laws and regulation:** Constitutional provisions- Article 48A, Article 51A (g) and other derived environmental rights; Introduction to environmental legislations on the forest, wildlife and pollution control.

**Environmental management system:** ISO 14001 Life cycle analysis; Cost-benefit analysis Environmental audit and impact assessment; Environmental risk assessment, Pollution control and management; Waste Management- Concept of 3R (Reduce, Recycle and Reuse) and sustainability; Ecolabeling /Ecomark scheme

#### Suggested Readings

1. Jørgensen, Sven Marques, Erik João Carlos and Nielsen, Søren Nors (2016) Integrated Environmental Management, A transdisciplinary Approach. CRC Press.
2. Theodore, M. K. and Theodore, Louis (2021) Introduction to Environmental Management, 2nd Edition. CRC Press.
3. Barrow, C. J. (1999). Environmental management: Principles and practice. Routledge.
4. Tiefenbacher, J (ed.) (2022), Environmental Management - Pollution, Habitat, Ecology, and Sustainability, Intech Open, London. 10.5772/
5. Richard A. Marcantonio, Marc Lame (2022). Environmental Management: Concepts and Practical Skills. Cambridge University Press.

### Chapter 4: Environmental Treaties and Legislation

[10 hours]

An overview of instruments of international cooperation; bilateral and multilateral agreements; conventions and protocols; adoption, signature, ratification and entry into force; binding and non-binding measures; Conference of the Parties (COP)

**Major International Environmental Agreements:** Convention on Biological Diversity (CBD); Cartagena Protocol on Biosafety; Nagoya Protocol on Access and Benefit-sharing; Convention on International Trade in Endangered Species of Wild Flora and Fauna (CITES); Ramsar Convention on Wetlands of International Importance; United Nations Convention to Combat Desertification (UNCCD); Vienna Convention for the Protection of the Ozone Layer; Montreal Protocol on Substances that Deplete the Ozone Layer and the Kigali Amendment; Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal; Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade; Stockholm Convention on Persistent Organic Pollutants; Minamata Convention on Mercury; United Nations Framework Convention on Climate Change (UNFCCC); Kyoto Protocol; Paris Agreement; India's status as a party to major conventions

**Major Indian Environmental Legislations:** The Wild Life (Protection) Act, 1972; The Water (Prevention and Control of Pollution) Act, 1974; The Forest (Conservation) Act, 1980; The Air

(Prevention and Control of Pollution) Act, 1981; The Environment (Protection) Act, 1986; The Biological Diversity Act, 2002; The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006; Noise Pollution (Regulation and Control) Rules, 2000; Industry-specific environmental standards; Waste management rules; Ramsar sites; Biosphere reserves; Protected Areas; Ecologically Sensitive Areas; Coastal Regulation Zone; Status phase-out of production and consumption of Ozone Depleting Substances by India; National Green Tribunal; Some landmark Supreme Court judgements

**Major International organisations and initiatives:** United Nations Environment Programme (UNEP), International Union for Conservation of Nature (IUCN), World Commission on Environment and Development (WCED), United Nations Educational, Scientific and Cultural Organization (UNESCO), Intergovernmental Panel on Climate Change (IPCC), and Man and the Biosphere (MAB) programme.

### **Suggested Readings**

1. UNEP (2007) Multilateral Environmental Agreement Negotiator's Handbook, University of Joensuu, ISBN 978-952-458-992-5
2. Ministry of Environment, Forest and Climate Change (2019) A Handbook on International Environment Conventions & Programmes. <https://moef.gov.in/wp-content/uploads/2020/02/convention-V-16-CURVE-web.pdf>
3. Kanchi Kohli and Manju Menon (2021) Development of Environment Laws in India, Cambridge University Press.
4. India Code – Digital repository of all Central and State Acts: <https://www.indiacode.nic.in/>
5. Bohra, Saroj, Judicial Intervention and Evolution of Environmental Principles and Doctrines (January 7, 2019). Available at SSRN: <https://ssrn.com/abstract=3311406> or <http://dx.doi.org/10.2139/ssrn.3311406>

**Note:** Case Studies and Field Work is compulsory

The students are expected to be engaged in some of the following or similar identified activities:

1. Discussion on one national and one international case study related to the environment and sustainable development.
2. Field visits to identify local/regional environmental issues, make observations including data collection and prepare a brief report.
3. Documentation of campus biodiversity.
4. Campus environmental management activities such as solid waste disposal, water management, and sewage treatment.

**University of Pune**  
**Board of Studies in Mathematics**  
**S. Y. B. Sc. (Computer Science)**  
**Syllabus of Mathematics**

**Introduction:**

Savitribai Phule Pune University, Pune has decided to change the syllabi of various faculties from June, 2020. Taking into consideration the rapid changes in science and technology and new approaches in different areas of mathematics and related subjects Board of studies in Mathematics with concern of teachers of Mathematics from different colleges affiliated to Savitribai Phule Pune University, Pune has prepared the syllabus of S.Y.B.Sc. Computer Science Mathematics. To develop the syllabus the U.G.C. Model curriculum is followed.

**Aims:**

- i) Give the students a sufficient knowledge of fundamental principles ,methods and a clear perception of innumerable power of mathematical ideas and tools and know how to use them by modeling ,solving and interpreting.
- ii) Reflecting the broad nature of the subject and developing mathematical tools for continuing further study in various fields of science.
- iii) Enhancing students overall development and to equip them with mathematical modeling abilities, problem solving skills , creative talent and power of communication necessary for various kinds of employment .
- iv) Enabling students to develop a positive attitude towards mathematics as an interesting and valuable subject of study.

**Objectives:**

- (i) A student should be able to recall basic facts about mathematics and should be able to display knowledge of conventions such as notations, terminology and recognize basic geometrical figures and graphical displays, state important facts resulting from their studies.
- (ii) A student should get a relational understanding of mathematical concepts and concerned structures, and should be able to follow the patterns involved, mathematical reasoning.
- (iii) A student should get adequate exposure to global and local concerns that explore them many aspects of Mathematical Sciences.

(iv) A student be able to apply their skills and knowledge, that is, translate information presented verbally into mathematical form, select and use appropriate mathematical formulae or techniques in order to process the information and draw the relevant conclusion.

(v) A student should be made aware of history of mathematics and hence of its past, present and future role as part of our culture.

**\* Medium of Instruction: English**

**\* Eligibility:** F.Y.B.Sc. Computer Science, as per University rules.

**Structure of the course:**

| Semester - I |         |                                                      | Semester -II |                                                       |
|--------------|---------|------------------------------------------------------|--------------|-------------------------------------------------------|
| Paper I      | MTC-231 | Groups and Coding Theory                             | MTC-241      | Computational Geometry                                |
| Paper II     | MTC-232 | Numerical Techniques                                 | MTC-242      | Operations Research                                   |
| Paper III    | MTC-233 | Mathematics Practical: Python Programming Language-I | MTC-243      | Mathematics Practical: Python Programming Language-II |

**\* All three above courses are compulsory.**

**\* External Students: Not allowed.**

**\* Variation / Revaluation: Allowed for Paper- I and Paper-II.**

**\* Qualifications for Teacher: M.Sc. Mathematics (with NET /SET as per existing rules )**

**Equivalence of Previous syllabus along with new syllabus:**

|          | Semester-III                      |                             | Semester-IV                     |                                 |
|----------|-----------------------------------|-----------------------------|---------------------------------|---------------------------------|
|          | New Course                        | Old Course                  | New Course                      | Old Course                      |

---

### Semester III

#### MTC-231 : Groups and Coding Theory

##### Unit 1. Integers

[05 Lectures]

- 1.1 Division Algorithm (without Proof)
- 1.2 G.C.D. using division algorithm and expressing it as linear combination
- 1.3 Euclid's lemma
- 1.4 Equivalence relation (revision), Congruence relation on set of integers, Equivalence class partition

##### Unit 2. Groups

[03 Lectures]

- 2.1 Binary Operation
- 2.2 Group: Definition and Examples
- 2.3 Elementary Properties of Groups

##### Unit 3. Finite Groups and Subgroups

[10 Lectures]

- 3.1 Order of a group, order of an element
- 3.2 Examples ( $\mathbb{Z}_n, +$ ) and  $(U(n), *)$
- 3.3 Subgroup definition, Finite subgroup test, subgroups of  $\mathbb{Z}_n$
- 3.4 Generator, cyclic group, finding generators of  $\mathbb{Z}_n$  (Corollary 3,4 without proof)
- 3.5 Permutation group, definition, composition of two permutations, representation as product of disjoint cycles, inverse and order of a permutation, even/ odd permutation
- 3.6 Cosets: Definition, Examples and Properties, Lagrange Theorem (without Proof)

##### Unit 4. Groups and Coding Theory

[18 Lectures]

- 4.1 Coding of Binary Information and Error detection
- 4.2 Decoding and Error Correction
- 4.3 Public Key Cryptography

##### Text Books:-

1. **Contemporary Abstract Algebra By J. A, Gallian (Seventh Edition)**  
Unit 1: Chapter 0, Unit 2: Chapter 2, Unit 3: Chapter 3, 4, 5 and 7
2. **Discrete Mathematical Structures By Bernard Kolman, Robert C. Busby and Sharon Ross (6<sup>th</sup> Edition) Pearson Education Publication**  
Unit 4: Chapter 11

#### MTC-232 : Numerical Techniques

**Unit 1: Algebraic and Transcendental Equation****[04 Lectures]**

- 1.1 Introduction to Errors
- 1.2 False Position Method
- 1.3 Newton-Raphson Method

**Unit 2: Calculus of Finite Differences and Interpolation****[16 Lectures]**

- 2.1 Differences
- 2.2. Forward Differences
- 2.3 Backward Differences
- 2.4 Central Differences
- 2.5 Other Differences ( $\delta$ ,  $\mu$  operators)
- 2.6 Properties of Operators
- 2.7 Relation between Operators
- 2.8 Newton's Gregory Formula for Forward Interpolation
- 2.9 Newton's Gregory Formula for Backward Interpolation
- 2.10 Lagrange's Interpolation Formula
- 2.11 Divided Difference
- 2.12 Newton's Divided Difference Formula

**Unit 3: Numerical Integration****[08 Lectures]**

- 3.1 General Quadrature Formula
- 3.2 Trapezoidal Rule
- 3.3 Simpson's one-Third Rule
- 3.4 Simpson's Three-Eight Rule

**Unit 4: Numerical Solution of Ordinary Differential Equation****[08 Lectures]**

- 4.1 Euler's Method
- 4.2 Euler's Modified Method
- 4.3 Runge-Kutta Methods

**Text Book:-****1. A textbook of Computer Based Numerical and Statistical Techniques, by A. K.**

**Jaiswal and Anju Khandelwal. New Age International Publishers.**

**Unit 1:** Chapter 2: Sec. 2.1, 2.5, 2.7

**Unit 2:** Chapter 3: Sec. 3.1, 3.2, 3.4, 3.5, Chapter 4: Sec. 4.1, 4.2, 4.3,  
Chapter 5: Sec. 5.1, 5.2, 5.4, 5.5

**Unit 3:** Chapter 6: Sec. 6.1, 6.3, 6.4, 6.5, 6.6, 6.7

**Unit 4:** Chapter 7: Sec. 7.1, 7.4, 7.5, 7.6

**Reference Books:-**

1. S.S. Sastry; Introductory Methods of Numerical Analysis, 3rd edition, Prentice Hall of India, 1999.
2. H.C. Saxena; Finite differences and Numerical Analysis, S. Chand and Company.
3. K.E. Atkinson; An Introduction to Numerical Analysis, Wiley Publications.
4. Balguruswamy; Numerical Analysis.

**MTC-233: Mathematics Practical: Python Programming Language-I****Unit 1: Introduction to Python**

- 1.1 Installation of Python
- 1.2 Values and types: int, float and str,
- 1.3 Variables: assignment statements, printing variable values, types of variables.
- 1.4 Operators, operands and precedence: +, -, /, \*, \*\*, % PEMDAS(Rules of precedence)
- 1.5 String operations: + : Concatenation, \* : Repetition
- 1.6 Boolean operator:
  - 1.6.1 Comparison operators: ==, !=, >, =, <=
  - 1.6.2 Logical operators: and, or, not
- 1.7 Mathematical functions from math, cmath modules.
- 1.8 Keyboard input: input() statement

**Unit 2: String, list, tuple**

- 2.1 Strings:
  - 2.1.1 Length (Len function)
  - 2.1.2 String traversal: Using while statement, Using for statement
  - 2.1.3 String slice
  - 2.1.4 Comparison operators (>, <, ==)
- 2.2 Lists:
  - 2.2.1 List operations
  - 2.2.2 Use of range function
  - 2.2.3 Accessing list elements
  - 2.2.4 List membership and for loop
  - 2.2.5 List operations
  - 2.2.6 Updating list: addition, removal or updating of elements of a list

## 2.3 Tuples:

- 2.3.1 Defining a tuple,
- 2.3.2 Index operator,
- 2.3.3 Slice operator,
- 2.3.4 Tuple assignment,
- 2.3.5 Tuple as a return value

## **Unit 3: Iterations and Conditional statements**

- 3.1 Conditional and alternative statements, Chained and Nested Conditionals: if, if-else, if-elif-else, nested if, nested if-else
- 3.2 Looping statements such as while, for etc, Tables using while.
- 3.3 Functions:
  - 3.3.1 Calling functions: type, id
  - 3.3.2 Type conversion: int, float, str
  - 3.3.3 Composition of functions
  - 3.3.4 User defined functions, Parameters and arguments

## **Unit 4: Linear Algebra**

- 4.1 Matrix construct, eye(n), zeros(n,m) matrices
- 4.2 Addition, Subtraction, Multiplication of matrices, powers and invers of a matrix.
- 4.3 Accessing Rows and Columns, Deleting and Inserting Rows and Columns
- 4.4 Determinant, reduced row echelon form, nullspace, column space, Rank
- 4.5 Solving systems of linear equations (Gauss Elimination Method, Gauss Jordan Method, LU- decomposition Method)
- 4.6 Eigenvalues, Eigenvectors, and Diagonalization

## **Unit 5: Numerical methods in Python**

- 5.1 Roots of Equations
- 5.2 Newton-Raphson Method
- 5.3 False Position (Regula Falsi) Method
- 5.4 Numerical Integration:
  - 5.1.1 Trapezoidal Rule,
  - 5.1.2 Simpson's  $1/3^{\text{rd}}$  Rule,
  - 5.1.3 Simpson's  $3/8^{\text{th}}$  Rule

## **Text Books:-**

1. Downey, A. et al., **How to think like a Computer Scientist: Learning with Python, John Wiley, 2015.**  
Sections: 1, 2, 3
2. Robert Johansson, **Introduction to Scientific Computing in Python**  
Section: 4

## **Reference Books:-**

1. Lambert K. A., **Fundamentals of Python - First Programs, Cengage Learning India, 2015.**
2. Guzdial, M. J., **Introduction to Computing and Programming in Python, Pearson**

India.

3. Perkovic, L., Introduction to Computing Using Python, 2/e, John Wiley, 2015.
4. Zelle, J., Python Programming: An Introduction to Computer Science, Franklin, Beedle & Associates Inc.
5. Sandro Tosi, Matplotlib for Python Developers, Packt Publishing Ltd.(2009)

**Practicals:**

**Practical 1:** Introduction to Python, Python Data Types-I (Unit 1)

**Practical 2:** Python Data Types- II (Unit 2)

**Practical 3:** Control statements in Python-I (Unit 3- 3.1, 3.2)

**Practical 4:** Control statements in Python-II (Unit 3- 3.3)

**Practical 5:** Application : Matrices (Unit 4 – 4.1-4.3)

**Practical 6:** Application : Determinants, system of Linear Equations (Unit 4- 4.4, 4.5)

**Practical 7:** Application : System of equations (Unit 4- 4.5)

**Practical 8:** Application : Eigenvalues, Eigenvectors (Unit 4 – 4.6)

**Practical 9:** Application : Eigenvalues, Eigenvectors (Unit 4 – 4.6)

**Practical 10:** Application : Roots of equations (Unit 5 – 5.1)

**Practical 11:** Application : Numerical integration (Unit 5 – 5.2, 5.3)

**Practical 12:** Application : Numerical integration (Unit 5 – 5.4)

**Semester - IV**

**MTC-241: Computational Geometry**

**Unit 1. Two dimensional transformations:**

**[12 Lectures]**

- 1.1 Introduction.
- 1.2 Representation of points.
- 1.3 Transformations and matrices.
- 1.4 Transformation of points.
- 1.5 Transformation of straight lines
- 1.6 Midpoint Transformation
- 1.7 Transformation of parallel lines
- 1.8 Transformation of intersecting lines
- 1.5 Transformation: rotations, reflections, scaling, shearing.
- 1.6 Combined transformations.
- 1.7 Transformation of a unit square.
- 1.8 Solid body transformations.
- 1.9 Translations and homogeneous coordinates.
- 1.10 Rotation about an arbitrary point.
- 1.11 Reflection through an arbitrary line.

**Unit 2. Three dimensional transformations:**

**[08 Lectures]**

- 2.1 Introduction.
- 2.2 Three dimensional – Scaling, shearing, rotation, reflection, translation.
- 2.3 Multiple transformations.
- 2.4 Rotation about – an axis parallel to coordinate axes, an arbitrary line
- 2.5 Reflection through – coordinate planes, planes parallel to coordinate planes , an arbitrary plane

**Unit 3. Projection****[08 Lectures]**

- 3.1 Orthographic projections.
- 3.2 Axonometric projections.
- 3.3 Oblique projections
- 3.4 Single point perspective projection

**Unit 4. Plane and space Curves:****[08 Lectures ]**

- 4.1 Introduction.
- 4.2 Curve representation.
- 4.3 Parametric curves.
- 4.4 Parametric representation of a circle and generation of circle.
- 4.5 Bezier Curves – Introduction, definition, properties (without proof), Curve fitting (up to  $n = 3$ ), equation of the curve in matrix form (upto  $n = 3$ )

**Textbook:**

**1. D. F. Rogers, J. A. Adams, Mathematical elements for Computer graphics, Mc Graw Hill Intl Edition.**

Unit 1: Chapter 2: Sec. 2-1 to 2.17

Unit 2: Chapter 3: Sec. 3.1 to 3.10,

Unit 3: Chapter 3: Sec. 3.12 to 3.14

Unit 4: Chapter 4: Sec. 4.1, 4.2, 4.5, Chapter 5: Sec. 5.1, 5.8

**Reference books:**

1. Computer Graphics with OpenGL, Donald Hearn, M. Pauline Baker, Warren Carithers, Pearson (4<sup>th</sup> Edition)
2. Schaum Series, Computer Graphics.

**MTC-242: Operations Research****Unit 1: Linear Programming Problem I****[12 Lectures]**

- 1.1 Introduction Definition and Examples
- 1.2 Problem solving using Graphical method
- 1.3 Theory of Linear Programming, Slack and surplus variables, Standard form of LPP, Some important definitions, Assumptions in LPP, Limitations of Linear programming, Applications of Linear programming, Advantages of Linear programming Techniques
- 1.4 Simplex method, Big- M-method

**Unit 2: Linear Programming Problem II****[08 Lectures]**

- 2.1 Special cases of LPP : Alternative solution, Unbounded solution, Infeasible solution
- 2.2 Duality in Linear Programming, Primal to dual conversion, Examples

**Unit 3: Assignment Models****[06 Lectures ]**

- 3.1 Assignment Model -Introduction
- 3.2 Hungarian method for Assignment problem

**Unit 4: Transportation Models****[10 Lectures]**

- 4.1 Introduction, Tabular representation

- 4.2 Methods of IBFS (North-West rule, Matrix-minima, Vogel's Approximation), Algorithms
- 4.3 The Optimality Test of Transportation Model (MODI method only)

**Text Book:-**

**Operation Research (12<sup>th</sup> Edition), by S.D.Sharma.**

- Unit 1: Chapter 1: Sec. 1.1, 1.3-1, 1.3-2, 1.5, 1.6, 1.8, 1.9, 1.10, 1.11, 1.12,  
Chapter 3: Sec. 3.1, 3.2, 3.3, 3. 4, 3.5-4,
- Unit 2: Chapter 3: Sec. 3.8-1,3.8-2, Chapter 5: Sec. 5.1-1, 5.2-1,5.3,5.7-1, 5.7-2
- Unit 3: Chapter 9: Sec. 9.1, 9.2, 9.4-1, 9.4-2, 9.5, 9.6, 9.7-1, 9.7-2
- Unit 4: Chapter 10: 10.1, 10.2, 10.5, 10.8-1,10.9, 10.10

**Reference Books:-**

1. Operations Research by H. A. Taha
2. Operations Research by R. Panneerselvam, Prentice Hall of India.
3. Principles of Operations Research by H. M. Wagner, Prentice Hall of India.
4. Operations Research by Gupta and Hira.
5. Operation Research by J.K. Sharma

**MTC-243: Mathematics Practical: Python Programming Language-II**

**Unit 1: 2D, 3D Graphs**

- 1.1 Installation of numpy, matplotlib packages
- 1.2 Graphs plotting of functions such as ... etc.
- 1.3 Different formats of graphs.
- 1.3 Three-dimensional Points and Lines
- 1.4 Three-dimensional Contour Plots
- 1.5 Wireframes and Surface Plots
- 1.6 Graphs plotting of functions such as... etc.

**Unit 2: Computational Geometry**

- 1.1 Points: The distance between two points, Lists of Points - the PointList class, Integer point lists, Ordered Point sets, Extreme Points of a PointList, Random sets of Points not in general position
- 2.2 Points: Displaying Points and other geometrical objects, Lines, rays, and line segments, The geometry of line segments, Displaying lines, rays and line segments
- 2.3 **Polygon** : Representing polygons in Python, Triangles, Signed area of a triangle, Triangles and the relationships of points to lines, is Collinear, is Left, is Left On, is Right, is Right On, Between
- 2.4 **Two dimensional rotation and reflection**
- 2.5 **Three dimensional rotation and reflection**
- 2.6 Generation of Bezier curve with given control points

**Unit 3: Study of Operational Research in Python**

3.1 Linear Programming in Python  
3.2 Introduction to Simplex Method in Python

**Practicals:**

- Practical 1:** Graph Plotting (Unit 1 – 1.1 – 1.3)  
**Practical 2:** Graph Plotting (Unit 1 – 1.4 – 1.7)  
**Practical 3:** Application to Computational Geometry (Unit 2 – 2.1)  
**Practical 4:** Application to Computational Geometry (Unit 2 – 2.2)  
**Practical 5:** Application to Computational Geometry (Unit 2 – 2.3)  
**Practical 6:** Study of Graphical aspects of Two dimensional transformation matrix using matplotlib  
**Practical 7:** Study of Graphical aspects of Three dimensional transformation matrix using matplotlib  
**Practical 8:** Study of Graphical aspects of Three dimensional transformation matrix using matplotlib  
**Practical 9:** Study of effect of concatenation of Two dimensional and Three dimensional transformations  
**Practical 10:** Generation of Bezier curve using given control points  
**Practical 11:** Study of Operational Research in Python (Unit 3.1)  
**Practical 12:** Study of Operational Research in Python (Unit 3.2)

**Text Books:-**

1. Jaan Kiusalaas, **Numerical Methods in Engineering with Python**, Cambridge University Press, (2005)  
Sections: 3
2. Robert Johansson, **Introduction to Scientific Computing in Python**  
Section: 1
3. Jason Brownlee, **Basics of Linear Algebra for Machine Learning, Discover the Mathematical Language of Data in Python**  
Sections: 2

**Reference Books:-**

5. Jim Arlow, **Interactive Computational Geometry in Python**

**Note:**

- (i) In paper -I , paper-II and paper-III, each course is of 50 marks ( 35 marks theory and 15 marks internal examination).
- (ii) Paper III: Mathematics Practical - MTC-233 and MTC-243 is practical course and

is of 50 marks. Practicals shall be performed on computer.

**Examination:**

**A) Pattern of examination: Paper- I, Paper-II and paper-III: Semesterwise**

**B) Pattern of question papers: For Paper -I and Paper-II**

**Q 1. Attempt any 05 out of 07 questions each of 01 marks. [05 Marks]**

**Q 2. Attempt any 02 out of 04 questions each of 05 marks. [10 Marks]**

**Q 3. Attempt any 02 out of 04 questions each of 05 marks. [10 Marks]**

**Q 4. Attempt any 02 out of 04 questions each of 10 marks. [10 Marks]**

**C) Instructions Regarding Practical:**

**Paper-III:Mathematics Practical:**

**(i) Mathematics Practical, external examiner shall be appointed by Savitribai Phule Pune University, Pune.**

**(ii) The minimum duration of practical examination is 3 hours.**

**(iii) The semester examination is of 35 marks 15 marks are from internal evaluation (Journal, attendance and viva-voce or internal test etc.)**

**(iv) The slips for the questions on programming and problem solving using python shall be prepared and provided and these can be used at least for 3 years.**

**D) Standard of passing:**

**For Paper- I, Paper-II and Paper -III: 14 Marks out of 35 and 06 marks out of 15 marks and total should be 20 marks for each course.**

| <b>COMPUTER NETWORKS-I</b><br>(Effective for the academic year 2024-2025)<br><b>SEMESTER-IV</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |        |                 |                      |

**Semester I, Paper-III****Practical Course Based on EVS -231 & EVS- 232.**

| <b>Sr. No.</b> | <b>Description</b>                                                                                                                  | <b>Practical Type</b> | <b>Practical Sessions</b> |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------|-----------------------|---------------------------|
| <b>1.</b>      | Measurement of Primary Productivity of grassland by Harvest Method.                                                                 | Field + Laboratory.   | <b>01</b>                 |
| <b>2.</b>      | Estimation of Total Chlorophyll from plants in Clean & Polluted Environment.                                                        | Laboratory.           | <b>01</b>                 |
| <b>3.</b>      | Study of grassland vegetation by List Count Quadrat Method to determine the Frequency, Density & Abundance.                         | Field + Laboratory    | <b>01</b>                 |
| <b>4.</b>      | Determination of Frequency & Abundance of species across terrestrial – aquatic transitional zone, by Line Transect Method.          | Field + Laboratory    | <b>01</b>                 |
| <b>5.</b>      | Determination of Density of species across terrestrial – aquatic transitional zone by Belt Transect Method.                         | Field + Laboratory    | <b>01</b>                 |
| <b>6.</b>      | Field visit to study Watershed Mgmt. Techniques.                                                                                    | Visit.                | <b>01</b>                 |
| <b>7.</b>      | Visit to Nature Interpretation / Information Centre.                                                                                | Visit.                | <b>01</b>                 |
| <b>8.</b>      | Visit to National Park / Wildlife Sanctuary to study Wildlife & various Inter-specific & Intra-specific Relations.                  | Visit.                | <b>≥ 01 Day</b>           |
| <b>9.</b>      | Continuation of the use of Social Media for e-networking & dissemination of ideas on Environmental Issues Pertaining to the Course. | ---                   | <b>≥ 02</b>               |
| <b>10.</b>     | Identification of advanced cultivars in the Local market                                                                            | Visit.                | <b>01</b>                 |
| <b>11.</b>     | Field visit to study Rain water Harvesting technique                                                                                | Visit.                | <b>01</b>                 |
| <b>12.</b>     | Determination of minimum area and number of quadrates for vegetation                                                                | Field + Laboratory    | <b>01</b>                 |
| <b>13.</b>     | Determination of Shannon Diversity Index of a vegetation ( Data sheet)                                                              | Laboratory.           | <b>01</b>                 |
| <b>14.</b>     | Determination of Simpson Diversity Index of a vegetation ( Data sheet)                                                              | Laboratory.           | <b>01</b>                 |
| <b>15.</b>     | Visit to Soil Survey Department.                                                                                                    | Visit.                | <b>01</b>                 |
| <b>16.</b>     | Study of Soil sampling techniques                                                                                                   | Visit.                | <b>01</b>                 |

### **Semester II, Paper-III**

### **Practical Course Based on EVS -241 & EVS- 242.**

| <b>Sr. No.</b> | <b>Description</b>                                                                                           | <b>Practical Type</b> | <b>Practical Sessions</b> |
|----------------|--------------------------------------------------------------------------------------------------------------|-----------------------|---------------------------|
| <b>1.</b>      | Sampling of Air by High Volume Sampler                                                                       | Field + Laboratory    | <b>01</b>                 |
| <b>2.</b>      | Determination of Optimum Dose of Alum (Coagulant) required for water.                                        | Laboratory.           | <b>01</b>                 |
| <b>3.</b>      | Determination of Turbidity of water. (Turbidimeter / Nephelometer)                                           | Laboratory.           | <b>01</b>                 |
| <b>4.</b>      | Determination of Residual Chlorine from treated water.                                                       | Laboratory.           | <b>01</b>                 |
| <b>5.</b>      | Determination of Dissolved Oxygen in water by Winkler's method                                               | Laboratory.           | <b>01</b>                 |
| <b>6.</b>      | Determination of Nitrate from water ( Calorimeter)                                                           | Laboratory.           | <b>01</b>                 |
| <b>7.</b>      | Determination of Phosphate from water. (Colorimeter)                                                         | Laboratory.           | <b>01</b>                 |
| <b>8.</b>      | Determination of Soluble Salts from Soil.                                                                    | Laboratory.           | <b>01</b>                 |
| <b>9.</b>      | Determination of Available Nitrogen from soil.                                                               | Laboratory.           | <b>01</b>                 |
| <b>10.</b>     | Study of Water Sampling and Preservation techniques                                                          | Field + Laboratory    | <b>01</b>                 |
| <b>11.</b>     | Measurement of sounds by DB meter / SLM in silent, industrial, residential and commercial zones and Analysis | Field + Laboratory    | <b>01</b>                 |
| <b>12.</b>     | Estimation of AGB, BGB and Carbon from sampling of trees                                                     | Field + Laboratory    | <b>01</b>                 |
| <b>13.</b>     | Determination of Lime required for Acidic soil                                                               | Laboratory            | <b>01</b>                 |
| <b>14.</b>     | Estimation of Productivity of Lake using DO method                                                           | Field + Laboratory    | <b>02</b>                 |
| <b>15.</b>     | Estimation of NO <sub>x</sub> content of given samples                                                       | Laboratory.           | <b>01</b>                 |
| <b>16.</b>     | Estimation of SO <sub>x</sub> content of given samples                                                       | Laboratory.           | <b>01</b>                 |

**S.Y.B.Sc.(Computer Science), Electronics- Semester III**  
**Paper-I: Microcontroller Architecture & Programming (ELC 231)**

**Objectives:**

1. To study the basics of 8051 microcontroller
2. To study the Programming of 8051 microcontroller
3. To study the interfacing techniques of 8051 microcontroller
4. To design different application circuits using 8051 microcontroller

**Course Outcomes :** On completion of the course, student will be able

1. To write programs for 8051 microcontroller
2. To interface I/O peripherals to 8051 microcontroller
3. To design small microcontroller based projects

**COURSE CONTENTS**

**UNIT- 1: Basics of Microcontroller & Intel 8051 architecture****[08]**

Introduction to microcontrollers, difference in controller and processor.

Architecture of 8051, Internal block diagram, Internal RAM organization, SFRs, pin functions of 8051, I/O port structure & Operation, External Memory Interface.

**UNIT-2: Programming model of 8051****[10]**

Instruction classification, Instruction set, Addressing Modes: Immediate, register, direct, indirect and relative, assembler directives (ORG, END), features with examples, I/O Bit & Byte programming using assembly language for LED and seven segment display (SSD) interfacing.

Introduction to 8051 programming in C.

**UNIT- 3: Timer /Counter, Interrupts****[10]**

Timer / counter: TMOD, TCON, SCON, SBUF, PCON Registers, Timer modes, programming for time delay using mode 1 and mode 2.

Interrupts: Introduction to interrupt, Interrupt types and their vector addresses, Interrupt enable register and interrupt priority register (IE, IP)

**UNIT- 4: Interfacing, Serial Communication****[08]**

Programming of serial port without interrupt, Serial Communication: Synchronous and asynchronous serial communication, Use of timer to select baud rate for serial communication. Interfacing : ADC, DAC, LCD, stepper motor.

**Recommended books:**

1. 8051 microcontroller and Embedded system using assembly and C : Mazidi and McKinley, Pearson publications
2. The 8051 microcontroller – Architecture, programming and applications: K.Uma Rao and Andhe Pallavi, Pearson publications.

**S.Y.B.Sc. Computer Science), Electronics, Semester III**  
**Paper-II, Digital Communication and Networking, ELC- 232**

**Objectives:**

1. To introduce to all aspects of data communication system
2. To introduce various digital modulation schemes
3. To identify the need of data coding and error detection/correction mechanism.
4. To study bandwidth utilization techniques : multiplexing and Spectrum spreading
5. To know data link layer protocol: Media Access Control
6. To study OSI and TCP/IP models of Networking.

**Course Outcomes :** On completion of the course, student will be able

1. Define and explain terminologies of data communication
2. Understand the impact and limitations of various digital modulation techniques
3. To acknowledge the need of spread spectrum schemes.
4. Identify functions of data link layer and network layer while accessing communication link
5. To choose appropriate and advanced techniques to build the computer network

**COURSE CONTENTS**

**UNIT 1: Introduction to Electronic Communication****(9)**

**Introduction to Communication:** Elements of Communication system, types of noise sources, Electromagnetic spectrum, signal and channel bandwidth,

**Types of communication:** simplex, half duplex, full duplex, baseband and broadband,

**Serial communication:** asynchronous and synchronous,

**Information Theory:** Information entropy, rate of information (data rate, baud rate), channel capacity, Nyquist theorem, Signal to noise ratio, Noise Figure, Shannon theorem,

**Error handling codes:** Necessity, Hamming code, CRC

**UNIT 2: Modulation and Demodulation****(5)**

**Introduction to modulation and demodulation:** Concept and need of modulation and demodulation,

**Digital Modulation techniques:** Pulse Code Modulation (PCM), FSK, QPSK, QAM.

**UNIT 3: Multiplexing, Spectrum Spreading and Media Access Control (12)**

**Multiplexing techniques:** Frequency division multiplexing, wavelength division multiplexing, Time division multiplexing

**Spread Spectrum techniques:** Frequency hopping Spread Spectrum, Direct Sequence Spread Spectrum

**Media Access Control (MAC):**

Random Access Protocol: ALOHA, CSMA, CSMA/CD, CSMA/CA,

Controlled Access Protocols: Reservation, Polling, Token passing,

Channelization Protocols: FDMA, TDMA, CDMA.

**UNIT 4: Computer Networking (10)**

**Introduction to computer networks**

**Types of networks :** LAN, MAN, WAN, Wireless networks, Switching, Internet,

**Network topology :** point to point, Star, Ring, Bus, Mesh, Tree, Daisy Chain, Hybrid

**Network devices :** Repeater, Switch, Networking cables, Router, Bridge, Hub, Brouter, Gateway.

**Wired LANs:-**

**Ethernet:** Ethernet protocol, standard Ethernet, 100 MBPS Ethernet, Gigabit Ethernet, 10 Gigabit Ethernet,

**Computer network model:** OSI and TCP/IP.

**Recommended books:**

- 1.Communication Electronics: Principles and Applications, Frenzel, Tata Mc Graw Hill publication, 5<sup>th</sup> edition.
2. Data Communication and Networking, Forouzan, Mc Graw Hill publication, 5<sup>th</sup> edition
3. Computer Networks, Tanenbaum, PHI publication, 5<sup>th</sup> edition

**S.Y.B.Sc.(Computer Science), Electronics, Semester III  
Paper III, Practical Course (ELC-233)****Objectives:**

1. To get hands on training of Embedded C
2. To study experimentally interfacing of microcontroller
3. To design, build and test modulator and demodulators of digital communication
4. To build and test experimentally various techniques of wired communication
5. To develop practical skills of network setup

**Course Outcomes :** On completion of the course, student will be able

1. To design and build his/her own microcontroller based projects.
2. To acquire skills of Embedded C programming
3. To know multiplexing and modulation techniques useful in developing wireless application
4. Do build and test own network and do settings.

**Guidelines for Practical:**

- Practical batch size : 12
- Minimum no of Practical to be performed : 10
- At least five practical from each Group
- Electronics lab should have set up for embedded programming (Computers and microcontroller target and interfacing boards)

**COURSE CONTENTS****Group A: (Any 5)**

1. Arithmetic, logical & code conversion problems using assembly/C programming
2. Interfacing of thumbwheel & seven segment display to 8051 microcontroller
3. Traffic light controller using 8051 microcontroller
4. Interfacing LCD to 8051Microcontroller
5. Waveform generation using DAC Interface to 8051Microcontroller

6. Event counter using opto-coupler, seven segment LED/LCD display interface to 8051Microcontroller
7. Speed Control of stepper motor using 8051 microcontroller

**Group B: (Any 5)**

1. Study of 3 or 4 Bit Pulse Code Modulation technique
2. Study of Frequency Shift Keying
3. Study of Time Division Multiplexing
4. Study of Frequency Division Multiplexing
5. Study of Code Division Multiple Access System
6. Study of Error detection and correction by using Hamming Code technique
7. Study of Computer network components : Cables, Connectors, Routers, Switches, Ethernet and related interfacing cards
8. To study Configuration of IP and MAC address and to study Local Area Network setup

**S.Y.B. Sc. (Computer Science), Electronics, Semester IV****Paper I : Embedded System Design (ELC-241)****Objectives:**

1. To understand the concept of Embedded systems.
2. To study the design flow and available tools for an Embedded system.
3. To understand the implementation of embedded system using firmware and hardware components.
4. To acquire programming skills for the development of Embedded system design.
5. To develop practical skills for designing embedded system Applications.

**Course Outcomes :** On completion of the course, student will be able

1. To understand the difference between general computing and the Embedded systems.
2. To know the fundamentals of embedded systems.
3. Understand the use of Single board Computer (Such as Raspberry Pi) for an embedded system application.
4. Familiar with the programming environment to develop embedded systems and their interfaces with peripheral devices.
5. To develop familiarity with tools used to develop in an embedded environment.

**COURSE CONTENTS****Unit 1: Introduction to Embedded systems using single board computers (SBC) (08)**

Single boards computer block diagram, types, Comparison of SBC models, Specifications, I/O devices (Storage, display, keyboard and mouse), Network access devices

**Unit 2: Architecture of System on Chip (SOC) (08)**

Architecture of SoC, Basic version Broad Coprocessor, Pin Description of Raspberry Pi, Architectural features: CPU Overview, CPU Pipeline stages, CPU Cache Organization, Branch Prediction & Folding (Concept), GPU Overview

**Unit 3: Programming using Python (10)**

Overview of Rasberian OS (Operating System), Installation, different types of Operating Systems

Basic Python Programming (Script programming): Variable & data types, Flow Control structures, Conditional statements ( If...Then...else),

Functions: I/O function (GPIO, Digital), Time functions, Library functions

Basic Arithmetic Programs: Addition, Subtraction, Multiplication, Division

**Unit 4 : Interfacing of devices using Python Programming****(10)**

Basic interfacing: LED, Switch, LCD

Internal Advanced: Bluetooth, Wifi, Ethernet,

External advanced: Camera, Serial Communication GSM, Ultrasonic Sensor, PIR, Finger Print reader.

**Recommended Books:**

1. Raspberry Pi CookBook: Software & Hardware problems and Solutions By Simon Monk( O'Reilly Media Inc.)
2. Raspberry Pi Hardware Reference by Warren Gay ( Apress)
3. Raspberry Pi User Guide By Eben Upton, Greath Halfacree (John Wiley & Sons, Inc.)
4. Learning Python with Raspberry Pi, by Alex Bradbury, Ben Everard, John Wiley & Sons, Inc
5. Learn Raspberry Pi programming with Python By Wolfram Donat ( Apress)

**S.Y.B.Sc.(Computer Science), Electronics, Semester IV**  
**Paper II: Wireless Communication and Internet of Things (ELC242)**

**Objectives:**

1. To learn and understand applications of wireless communication system
2. To learn and understand cellular system
3. To learn and understand architecture of short range Wireless Technologies
4. To learn and understand basics of Internet of Things
5. To study applications of IoT

**Course Outcomes:** Students will be able to

1. Know working of wireless technologies such as Mobile communication, GSM, GPRS
2. Become familiar with 3G and 4G Cellular Network Technologies for Data Connections.
3. Understand working principles of short range communication application
4. Get introduce to upcoming technology of Internet of Things
5. Explore themselves and develop new IoT based applications

**COURSE CONTENTS**

**Unit1: Wireless Communication: Cellular Telephony (12)****Overview of wireless communication,**

**Introduction of cellular telephony system:** Frequency reuse, handoff strategies, Co-channel and adjacent channel interference, block diagram of mobile handset

**Overview of Cellular Telephony generations:** 1G to 5G, 3G (W-CDMA, UMTS), 4G(LTE)

**GSM:** architecture, frame structure, mobility management,

**GPRS :** architecture, application

**Unit 2 : Short Range Wireless Technologies and Location Tracking****(12)****Short range Technologies :**

*Bluetooth:* Bluetooth architecture, Bluetooth protocol stack, Bluetooth frame structure

*Zigbee:* Architecture, topologies, applications, Z wave: Protocol architecture, applications

*RFID:* working of RFID system, types of RFID tags, RFID frequencies, applications

**Location Tracking:** GPS system: components of GPS system (space segment, control segment, user segment), GPS receiver, Applications

**Unit 3: IoT Architecture****(08)**

**Introduction to IOT :** Evolution of IOT, M2M and/or IOT, Seven layer architecture of IoT, Role of cloud in IoT, cloud topologies, Cloud access, Protocols in IoT, Cross connectivity across IoT system components:

- Device to Gateway-short range Wireless: cellphone as gateway, dedicated wireless Access points
- Gateway to cloud: Long range connectivity, (wired, cellular, Satellite, WAN)
- Direct Device to Cloud connectivity ,

**Networking technologies:** Low power local area networking (LPLAN), Low power wide area networking (LPWAN) technologies, comparison of LoRa, sigfox NB-IoT, Cat –M.

**Unit 4: IoT Applications****(04)**

**Application domains,**

**Challenges in IoT :** Power consumption, Physical security, durability, Secure Connectivity, Secure Data Storage, Data volume, Scalability

**Case studies:**

Case Study 1: Smart Irrigation system for Agricultural field

Case Study 2:Home Automation

Case Study 3: Smart Cities

**Recommended books:**

1. Wireless Communications Principles and Practice, Rappaport, Pearson publication
2. Mobile Communications, Jochen Schiller, Pearson publication
3. Internet of Things : Principles and Paradigms, Rajkumar Buyya and Dastjerdi, MK publishers
4. Internet of Things, Mayur Ramgir, Pearson publication

**S.Y.B.Sc.(Computer Science), Electronics, Semester IV  
Paper III, Practical Course (ELC-243)****Objectives:**

1. To use basic concepts for building various applications of embedded electronics.
2. To build experimental setup and test the circuits.
3. To develop skills of analyzing test results of given experiments.
4. Developing Trained Personals for educating and training for upcoming graduates in wireless communication.
5. Implement basic IoT applications on embedded platform

**Course Outcomes :** On completion of the course, students will be able

1. To design and develop own smart applications using Raspberry-Pi
2. To write Python program for simple applications
3. To build own IoT based system

**Guidelines :**

- Practical batch size : 12
- Minimum no of Practical to be performed : 10
- Eight compulsory experiments: At least four practical from each Group
- One activity equivalent to 2 experiments by the student.
  - a. Continuation of F. Y. activity.
  - b. Electronics project Based on the Theory Courses learnt
  - c. Documentation type experiments
  - d. Presentation/Seminar on Electronics /advanced topic/research topics.

**Prerequisite:** Raspberry Pi boards, Arduino / LoRa boards

**COURSE CONTENTS****Group A (any 4)**

1. Programming of Raspberry Pi to control LEDs attached to the GPIO pins
2. Programming of Raspberry Pi to get feedback from a switch connected to the GPIO pins

3. Programming of Raspberry Pi to detect temperature using temperature sensor
4. Programming of Raspberry Pi to detect light intensity using photocell sensor
5. Programming of Raspberry Pi for Motion detection
6. Programming of Raspberry Pi for image detection

**Group B (any 4)**

1. Study of GSM system (Message transmission & Reception).
2. To study working of SIM card in GSM handset
3. Study of GPRS system
4. Study of Zig-bee for one application
5. Study of RFID system
6. Introduction to Python programming.
7. To study Arduino based LED switching using mobile
8. Temperature and humidity sensing using Arduino
9. LoRa Interfacing.

# **Savitribai Phule Pune University**

*(Formerly University of Pune)*

**Three Year B.Sc. Degree Program in Computer Science**

**(Faculty of Science & Technology)**

**S.Y.B.Sc. (Computer Science)**

**Choice Based Credit System Syllabus  
To be implemented from Academic Year  
2020-2021**

**S. Y. B. Sc.( Computer Science)****Semester III**

|------------------|--------------------------------------|-------------------|
| <b>Chapter 3</b> | <b>Title : Requirements Analysis</b> | <b>7 lectures</b> |
|------------------|--------------------------------------|-------------------|

3.1 Requirement Elicitation,  
 3.2 Software requirement specification (SRS)  
     3.2.1 Developing Use Cases (UML)  
 3.3 Building the Analysis Model  
     3.3.1 Elements of the Analysis Model  
     3.3.2 Analysis Patterns  
     3.3.3 Agile Requirements Engineering  
 3.4 Negotiating Requirements  
 3.5 Validating Requirements

|                  |                                      |                    |
|------------------|--------------------------------------|--------------------|
| <b>Chapter 4</b> | <b>Title : Requirements Modeling</b> | <b>10 lectures</b> |
|------------------|--------------------------------------|--------------------|

4.1 Introduction to UML  
 4.2 Structural Modeling  
     4.2.1 Use case model  
     4.2.2 Class model  
 4.3 Behavioral Modeling  
     4.3.1 Sequence model  
     4.3.2 Activity model  
     4.3.3 Communication or Collaboration model  
 4.4 Architectural Modeling  
     4.4.1 Component model  
     4.4.2 Artifact model  
     4.4.3 Deployment model

|                  |                                |                   |
|------------------|--------------------------------|-------------------|
| <b>Chapter 5</b> | <b>Title : Design Concepts</b> | <b>6 lectures</b> |
|------------------|--------------------------------|-------------------|

5.1 Design Process  
     5.1.1 Software Quality Guidelines and Attributes  
     5.1.2 Evolution of Software Design  
 5.2 Design Concepts  
     5.2.1 Abstraction  
     5.2.2 Architecture  
     5.2.3 Patterns  
     5.2.4 Separation of Concerns  
     5.2.5 Modularity  
     5.2.6 Information Hiding  
     5.2.7 Functional Independence  
     5.2.8 Refinement  
     5.2.9 Aspects  
     5.2.10 Refactoring  
     5.2.11 Object Oriented Design Concepts  
     5.2.12 Design Classes  
     5.2.13 Dependency Inversion  
     5.2.14 Design for Test  
 5.3 The Design Model  
     5.3.1 Data Design Elements  
     5.3.2 Architectural Design Elements

5.3.3 Interface Design Elements  
5.3.4 Component-Level Diagram  
5.4.5 Deployment-Level Diagram

**Assignment 4: Singly Linked List**

1. Dynamic implementation of Singly Linked List to perform following operations: Create, Insert, Delete, Display, Search, Reverse
2. Create a list in the sorted order.

**Assignment 5: Doubly Linked List**

1. Dynamic implementation of Doubly circular Linked List to perform following operations: Create, Insert, Delete, Display, Search

**Assignment 6: Linked List Applications**

1. Merge two sorted lists.  
Addition of two polynomials in a single variable.

**Assignment 7: Stack**

1. Static and Dynamic implementation of Stack to perform following operations: Init, Push, Pop, Peek, Isempty, Isfull

**Assignment 8: Applications of Stack**

1. Implementation of an algorithm that reverses string of characters using stack and checks whether a string is a palindrome.
2. Infix to Postfix conversion.
3. Evaluation of postfix expression.

**Assignment 9: Linear Queue**

1. Static and Dynamic implementation of linear Queue to perform following operations: Init, enqueue, dequeue Peek, IsEmpty, IsFull.

**Assignment 10: Circular and Priority Queue**

1. Implementation of circular queue
2. Implementation of priority queue

**Suggested Assignments for Software Engineering mini Project****3**

1. Prepare detailed statement of problem for the selected mini project
2. Identify suitable process model for the same.
3. Develop Software Requirement Specification for the project.
4. Identify scenarios and develop UML Use case
5. Other artifacts: Class Diagram, activity diagram, sequence diagram, component diagram and any other diagrams as applicable to the project.

Sample project titles: (These are just samples, students are suggested to take up different case studies)

1. Online mobile recharge system
2. Credit calculation system
3. Image sharing and editing system
4. Internal examination system
5. e-learning management system

| <b>Chapter 1</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Tree</b>                   | <b>10 lectures</b>                                  |
| 1.1 Concept and Terminologies<br>1.2 Types of Binary trees - Binary tree, skewed tree, strictly binary tree, full binary tree, complete binary tree, expression tree, binary search tree, Heap<br>1.3 Representation – Static and Dynamic<br>1.4 Implementation and Operations on Binary Search Tree - Create, Insert, Delete, Search, Tree traversals– preorder, inorder, postorder ( recursive implementation), Level-order traversal using queue, Counting leaf, non-leaf and total nodes, Copy, Mirror.<br>1.5 Applications of trees<br>1.5.1 Heap sort, implementation<br>1.5.2 Introduction to Greedy strategy, Huffman encoding (implementation using priority queue) |                               |                                                     |
| <b>Chapter 2</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Efficient Search Trees</b> | <b>8 lectures</b>                                   |
| 2.1 Terminology: Balanced trees - AVL Trees, Red Black tree, splay tree, Lexical search tree -Trie<br>2.2 AVL Tree- concept and rotations<br>2.3 Red Black trees - concept, insertion and deletion.<br>2.4 Multi-way search tree - B and B+ tree - Insertion, Deletion                                                                                                                                                                                                                                                                                                                                                                                                       |                               |                                                     |
| <b>Chapter 3</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Graph</b>                  | <b>12 lectures</b>                                  |
| 3.1 Concept and terminologies<br>3.2 Graph Representation –Adjacency matrix, Adjacency list, Inverse Adjacency list, Adjacency multilist<br>3.3 Graph Traversals – Breadth First Search and Depth First Search (with implementation)<br>3.4 Applications of graph                                                                                                                                                                                                                                                                                                                                                                                                            |                               |                                                     |

- 3.4.1 Topological sorting
- 3.4.2 Use of Greedy Strategy in Minimal Spanning Trees (Prims and Kruskals algorithm)
- 3.4.3 Single source shortest path - Dijkstra's algorithm
- 3.4.4 Dynamic programming strategy, All pairs shortest path - Floyd Warshall algorithm
- 3.4.5 Use of graphs in social networks

**Chapter 4****Hash Table****6 lectures**

- 4.1 Concept of hashing
- 4.2 Terminologies – Hash table, Hash function, Bucket, Hash address, collision, synonym, overflow etc.
- 4.3 Properties of good hash function
- 4.4 Hash functions : division function, MID square , folding methods
- 4.5 Collision resolution techniques
  - 4.5.1 Open Addressing - Linear probing, quadratic probing, rehashing
  - 4.5.2 Chaining - Coalesced , separate chaining

| <p><b>Lab Book:</b><br/> The lab book is to be used as a hands-on resource, reference and record of assignment submission and completion by the student. The lab book contains the set of assignments which the student must complete as a part of this course.</p> <p><b>Programming Assignments:</b><br/> Programs should be done individually by the student in the respective login. The codes should be uploaded on either the local server, Moodle, Github or any open source LMS. Print-outs of the programs and output may be taken but not mandatory for assessment.</p> <p><b>Assessment:</b><br/> Continuous assessment of laboratory work is to be done based on overall performance and lab assignments performance of student. Each lab assignment assessment will be assigned grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include-timely completion, performance, innovation, efficient codes and good programming practices.</p> <ul style="list-style-type: none"> <li>• <b>Internal Evaluation :</b> <ul style="list-style-type: none"> <li>○ 10 marks will be given based on Networking assignments.</li> <li>○ 5 marks will be allocated for Assignment completion and practical attendance</li> </ul> </li> <li>• <b>University Evaluation :</b> <ul style="list-style-type: none"> <li>○ The Practical slip will be of 35 Marks which will be based on Advanced Data structures.</li> </ul> </li> </ul> <p><b>Operating Environment:</b><br/> For Data Structures:</p> <ul style="list-style-type: none"> <li>• <b>Operating system:</b> Linux</li> <li>• <b>Editor:</b> Any linux based editor like vi, gedit etc.</li> <li>• <b>Compiler :</b> cc or gcc</li> </ul> |                                               |                                                                                 |

**Assignment 1 Binary Search Tree and Traversals**

1. Implement Binary Search Tree (BST) to perform following operations on BST– Create, Recursive Traversals - Inorder, Preorder, Postorder
2. Perform following operations: insert, delete

**Assignment 2 Binary Search Tree Operations**

1. Implement Binary Search Tree (BST) to perform following operations on BST–copy and mirror image of BST, counting leaf, non-leaf and total nodes.
2. Level-order traversal of binary search tree using queue.

**Assignment 3 Applications of Binary Tree**

1. Sort set of elements using Heap sort
2. Encode a set of characters using Huffman encoding

**Assignment 4 Graph implementation**

1. Implement Graph as adjacency matrix and adjacency list
2. Calculate indegree and outdegree of vertices
3. Graph traversals: BFS and DFS.

**Assignment 5 Graph Applications - I**

1. Implementation of Topological sorting
2. Implementation of Prims/Kruskals Minimum spanning tree algorithm

**Assignment 6 Graph Applications - II**

1. Implementation of Dijkstra's shortest path algorithm for finding Shortest Path from a given source vertex using adjacency cost matrix.
2. Implementation of Floyd Warshall algorithm for all pairs shortest path.

**Assignment 7 Hash Table**

1. Implementation of static hash table with Linear Probing.
2. Implementation of static hash table with chaining.

**Assignment 8 Hash Table-2**

1. Implementation of linked hash table with chaining.

**Assignment 9 Networking Assignment****Assignment 10 Networking Assignment**

# **SYBSC & SYBSC (Computer Science)**

## **ENGLISH**

### **(Ability Enhancement Compulsory Course-AECC)**

### **(Choice Based Credit System-35:15-Pattern)**

**(w. e. f- 2020- 2021)**

### **(02-Credit Course)**

**Text: *Horizons: English in Multivalent Contexts*** (Board of Editors- Orient BlackSwan)

#### **Preamble:**

This is an ABILITY ENHANCEMENT COURSE. Considering the needs of students and the requirements of professional sectors, the syllabus of this paper is designed to enhance linguistic and professional skills of the students. In the age of technology, it's high time for the students to acquire and exercise the skill and sub-skills of using English in multivalent contexts.

The paper aims at a balanced up-gradation of the students, focussing on their ability enhancement. Hence, to avoid a lopsided professional development, the humane values are also taken care of by accommodating literature section in the syllabus. The other units cater to the needs of enhancing speaking ability, writing ability, the ability to face an interview, the ability of using soft skills effectively while planning one's work and working on the plans. By and large, the present syllabus is an attempt to galvanise the existing competencies of the students and enhancing their abilities for a better performance and better results.

#### **Objectives:**

1. To introduce the use of English in multimedia
2. To acquaint the students with the language skills in multivalent contexts
3. To acquaint and enlighten students regarding the speaking skill in various contexts
4. To acquaint and familiarize the students with advanced writing skills in different contexts
5. To acquaint and familiarize the students with soft skills
6. To minimize the gap between the existing communicative skills of the students and the skills they require at professional level
7. To develop competence among the students to appreciate and analyze short stories and poetry

## **Semester-III**

**Text:** *Horizons: English in Multivalent Contexts* (Board of Editors- Orient BlackSwan)

### **Content-**

#### **UNIT-I- LITERATURE**

**10 Clock Hours**

**1. Short Story:**

i) 'A Shadow': R. K. Narayan

**2. Poetry:**

i) La Belle Dame sans Merci: John Keats

ii) Where the Mind is without Fear: Rabindranath Tagore

#### **UNIT-II-CONVERSATIONAL SKILL**

**10 Clock Hours**

(Sample Dialogues, Useful Expressions and Exercises)

1. Introducing Yourself and Others
2. Asking, Giving and Refusing Permission
3. Describing Daily Routine
4. Complaining and Apologizing
- 5.

#### **UNIT-III-INTERVIEW TECHNIQUES**

**10 Clock Hours**

1. Job Application Letter
2. Resume Writing
3. GDPI
4. Presentations

## **Semester-IV**

**Text:** *Horizons: English in Multivalent Context* (Board of Editors- Orient BlackSwan)

#### **UNIT-I-LITERATURE**

**10 Clock Hours**

**1. Short Story:**

i) My Lost Dollar: Stephen Leacock

**2. Poetry:**

i) The Bird Sanctuary: Sarojini Naidu

ii) Stopping by Woods on a Snowy Evening: Robert Frost

#### **UNIT-II-WRITING SKILLS**

**10 Clock Hours**

(Sample Passages, Useful Techniques and Exercises)

1. Notices
2. Agenda
3. Minutes
4. Content Writing

### **UNIT-III-SOFT SKILLS AND PERSONALITY DEVELOPMENT**

**(Sample Situations, Useful Techniques and Exercises)**

**10 Clock Hours**

1. An Introduction to Soft Skills
2. SWOC Analysis
3. Goal Setting
4. Project Management

.....

### **EVALUATION PATTERN**

Considering the choice-based credit system (CBCS) and the semester pattern, both Semesters-III & IV will have a uniform evaluation pattern of **50 marks** each. There will be an '**Internal Examination**' for **15 marks** and **Semester-end Examination** for **35 marks**.

The Internal Examination for **15 marks** will be conducted in two parts.

#### **1) Practical Examination for 05 marks:**

(The choices like Group Discussion, Mock Interviews, Seminar, Project Presentation, Role Play, Home Assignment, Library Work, Lecture Notes etc. can be considered.)

#### **2) A Mid-semester Written Test for 10 marks:**

The Mid-semester Written Test will be based on the book prescribed for the syllabus. The test aims at assessing students' writing competence in general. Hence, descriptive and essay type questions can be considered while setting the question paper.

#### **Semester-end Examination:**

The Semester-end Examination will have a uniform question paper pattern for both semesters. The pattern of the question paper is given below.

## SEMESTER-END EXAMINATION

### Question Paper Patterns (III & IV)

**Marks: 35**

**Time: 2 Clock Hours**

.....

#### Instructions:

1. All questions are compulsory.
  2. Figures to the right indicate full marks.
- .....

Q.1) Long-answer question on Unit-1

(Any 1 out of 2) (15)

Q.2) Short notes on Unit-2

(Any 2 out of 3) (10)

Q.3) Short notes on Unit-3

(Any 2 out of 3) (10)

| <b>Prerequisites</b><br>Data structures like stack, queue, linked list, tree, graph, hashing, file structures, any structured programming language                                                                                                                                                                                                                                                                                                                                                                                          |                                          |                                                      |
| <b>Course Objectives:</b><br>1. To understand the concept of operation system and its principle<br>2. To study the various functions and services provided by operating system<br>3. To understand the notion of process and threads                                                                                                                                                                                                                                                                                                        |                                          |                                                      |
| <b>Course Outcomes: After completion of this course students will be able to understand the concept of</b><br>1. Processes and Thread Scheduling by operating system<br>2. Synchronization in process and threads by operating system<br>3. Memory management by operating system using with the help of various schemes                                                                                                                                                                                                                    |                                          |                                                      |
| <b>Course Contents</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                          |                                                      |

Random access to file data  
Getting information on file  
Ownership and permissions  
Using PHP to access a database  
Relational databases and SQL  
PEAR DB basics  
Advanced database techniques

**Chapter 5    Handling email with php**

**2 Lectures**

Email background  
Internet mail protocol  
Structure of an email message  
Sending email and validation of Email\_id with php

| <p><b>Suggested Assignments for Foundations of Data Science</b></p> <p><b>Assignment 1:            The Data Science environment</b><br/> Getting introduced to Python IDLE, command line, online tools like google colaboratory and essential packages like NumPy, SciPy, pandas, scikit-learn, matplotlib, jupyter, beautiful-soup, etc.</p> <p><b>Assignment 2:            Loading the dataset</b><br/> Select a dataset from a list of publicly available datasets at UCI Machine Learning Repository and load it using Pandas. (Import different dataformat files like .CSV,.htm,.json etc. Briefly describe what the dataset is about and size of the dataset (e.g. number of tables, number of instances and attributes, etc.)</p> <p><b>Assignment 3:            Basic statistical operations</b><br/> Apply basic statistical operations on a dataset. For example - compute the mean, median, mode, range, quartiles, and variance for one or more attributes.</p> |                               |                                                                 |

**Assignment 4: Data preprocessing**

Apply data preprocessing techniques that are likely required for the dataset.

1) Partition them into appropriate number of bins by equal-frequency as well as equal-width partitioning.

2) Use smoothing by bin means to smooth the data based on the above partitioning,

3) Normalize the attribute based on min-max normalization and z-score normalization.

Comment on which method you would prefer to use for partitioning, smoothing, and normalization for the given attribute.

**Assignment 5: Data Visualization with matplotlib**

View the data using various 2-D, 3-D plots and charts, setting styles, saving the figures, customizing the legends, multiple subplots,

**SavitribaiPhule Pune University**  
**T.Y.B.Sc. (Computer Science) - Sem – V**  
**Course Type: DSEC - III**                      **Course Code: CS - 359**  
**Course Title : Practical Course based on CS - 355**

|                                                     |                     |                                                     |

| Teaching Scheme<br>5 Lect / week<br>Batch Size : 12 | No. of Credits<br>2 | Examination Scheme<br>IE : 15 marks<br>UE: 35 marks |
|-----------------------------------------------------|---------------------|-----------------------------------------------------|

**Course Objectives:**

Covers the complete scope of the syllabus.

1. Bringing uniformity in the way course is conducted across different colleges.
2. Continuous assessment of the students.

**Course Outcomes:**

1. Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
2. Read and make elementary modifications to Java programs that solve real-world problems.
3. Validate input in a Java program.

**Guidelines:**

**Operating Environment :**

- **Operating system** : Linux
- **Editor** : Anylinux based editor like vi, gedit and Use of IDE – Eclipse etc.
- **Compiler** : javac

**Submission :**

Each assignment will be assessed on a scale of 0 to 5 as indicated below.

- |                     |   |
|---------------------|---|
| ▪ Not done          | 0 |
| ▪ Incomplete        | 1 |
| ▪ Late Complete     | 2 |
| ▪ Needs improvement | 3 |
| ▪ Complete          | 4 |
| ▪ Well Done         | 5 |

**Assessment :**

Easy : All exercises are compulsory.

Medium : All exercises are compulsory.

**List of Assignments :**

**Assignment 1 : Java Tools and IDE, Simple java programs [Slot – 1]**

Introduction to the java environment

Use of java tools like java, javac, jdb and javadoc

Defining simple classes and creating objects.

**Assignment 2 : Array of Objects and Packages [Slot – 2]**

Defining a class.

Creating an array of objects.

Creating a package.

**Assignment 3 : Inheritance and Interfaces [Slot – 2]**

To implement inheritance in java.

To define abstract classes.

To define and use interfaces and Functional Interface.

**Assignment 4 : Exception And File Handling [Slot – 2]**

Demonstrate Exception Handling Mechanism in Java.

Use of try, catch, throw, throws ,finally blocks

Defining User defined Exception classes.

Creation of files and demonstration of I-O operations

**Assignment 5 : GUI Designing, Event Handling [Slot – 5]**

To demonstrate GUI creation using Swing Package and Layout managers.

To understand Event handling mechanism in Java.

Using Event classes, Event Listeners and Adapters

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                        |                                                      |

| Teaching Scheme<br>03 Lect / week                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | No. of Credits<br>2                                    | Examination Scheme:<br>IE : 15 marks<br>UE: 35 marks |
| <b>Course Objectives</b> <ol style="list-style-type: none"> <li>1. To introduce programming concepts using python</li> <li>2. Student should be able to develop Programming logic using python</li> <li>3. To develop basic concepts and terminology of python programming</li> <li>4. To test and execute python programs</li> </ol>                                                                                                                                                                                                                                                                                                                        |                                                        |                                                      |
| <b>Course Outcomes</b><br>On completion of the course, student will be able to– <ul style="list-style-type: none"> <li>• Develop logic for problem solving</li> <li>• Determine the methods to create and develop <b>Python programs</b> by utilizing the data structures like lists, dictionaries, tuples and sets.</li> <li>• To be familiar about the basic constructs of programming such as data, operations, conditions, loops, functions etc.</li> <li>• To write python programs and develop a small application project</li> </ul>                                                                                                                  |                                                        |                                                      |
| <b>Course Contents</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                        |                                                      |
| <b>Chapter 1</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>An Introduction to Python</b>                       | <b>3 Lect</b>                                        |
| Introduction to Python<br>The Python Programming Language, History, features, Applications, Installing Python, Running Simple Python program<br>Basics of Python<br>Standard data types - basic, none, Boolean (true & False), numbers, Variables, Constants, Python identifiers and reserved words, Lines and indentation, multi-line statements and Comments, Input/output with print and input, functions Declaration, Operations on Data such as assignment, arithmetic, relational, logical and bitwise operations, dry run, Simple Input and output etc.                                                                                               |                                                        |                                                      |
| <b>Chapter 2</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Control Statements</b>                              | <b>4 Lect</b>                                        |
| <b>Sequence Control</b> – Precedence of operators, Type conversion<br><b>Conditional Statements:</b> if, if-else, nested if-else,<br><b>Looping-</b> for, while, nested loops, loop control statements (break, continue, pass)<br>a. <b>Strings:</b> declaration, manipulation, special operations, escape character, string formatting operator, Raw String, Unicode strings, Built-in String methods.                                                                                                                                                                                                                                                      |                                                        |                                                      |
| <b>Chapter 3</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Lists, functions, tuples and dictionaries, Sets</b> | <b>7 Lect</b>                                        |
| <b>Python Lists:</b> Concept, creating and accessing elements, updating & deleting lists, traversing a List, reverse Built-in List Operators, Concatenation, Repetition, In Operator, Built-in List functions and methods.<br><b>Functions:</b> Definitions and Uses, Function Calls, Type Conversion Functions, Math Functions, Composition, Adding New Functions, Flow of Execution, Parameters and Arguments, Variables and Parameters, Stack Diagrams, Void Functions, Anonymous functions Importing with from, Return Values, Boolean Functions, More Recursion, Functional programming tools - filter(), map(), and reduce(), recursion, lambda forms. |                                                        |                                                      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                        |                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|----------------|
| <b>Tuples and Dictionaries:</b> Tuples, Accessing values in Tuples, Tuple Assignment, Tuples as return values, Variable-length argument tuples, and Basic tuples operations, Concatenation, Repetition, in Operator, Iteration, Built-in tuple functions, indexing, slicing and matrices. Creating a Dictionary, Accessing Values in a dictionary, Updating Dictionary, Deleting Elements from Dictionary, Properties of Dictionary keys, Operations in Dictionary, Built-In Dictionary Functions, Built-in Dictionary Methods.<br><b>Sets-</b> Definition, transaction of set(Adding, Union, intersection), working with sets                                                                                                                   |                                                        |                |
| <b>Chapter 4</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Modules ,Working with files, Exception handling</b> | <b>4 Lect</b>  |
| <b>Modules:</b> Importing module, Creating & exploring modules, Math module, Random module, Time module<br><b>Packages:</b> Importing package, creating package,examples<br><b>Working with files:</b> Creating files and Operations on files (open, close, read, write), File object attributes, file positions, Listing Files in a Directory, Testing File Types, Removing files and directories, copying and renaming files, splitting pathnames, creating and moving directories<br><b>Regular Expression-</b> Concept of regular expression, various types of regular expressions, using match function.<br><b>Exception Handling:</b> Built-in Exceptions, Handling Exceptions, Exception with Arguments, User-defined Exceptions.         |                                                        |                |
| <b>Demonstration</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Programming Assignments:</b>                        | <b>18 Lect</b> |
| <b>Out of 36 lectures, 18 are assigned for demonstration. Teacher should give demonstration of various programs mentioned below in the classroom or in the laboratory as per their convenience.</b><br><br>Programming assignments should be done individually by the student in their respective login from the list given in Labbook. The codes should be uploaded on either the local server, Moodle, Github or any LMS.<br><br>Assignment 1 - Python Basics<br>Assignment 2 – Arrays, Strings, and Functions<br>Assignment 3 - List, Tuples, Sets, and Dictionary<br>Assignment 4 - File Handling and Date-Time<br>Assignment 5 - Exception handling and Regular expression                                                                  |                                                        |                |
| <b>Reference Books:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                        |                |

**SavitribaiPhule Pune University**  
**T.Y.B.Sc. (Computer Science) - Sem – VI**  
**Course Type: DSEC - VI                      Course Code: CS - 369**  
**Course Title : Practical Course based on CS - 365**

|                                                    |                     |                                                     |
|----------------------------------------------------|---------------------|-----------------------------------------------------|
| Teaching Scheme<br>5 Lect/ week<br>Batch Size : 12 | No. of Credits<br>2 | Examination Scheme<br>IE : 15 marks<br>UE: 35 marks |
|----------------------------------------------------|---------------------|-----------------------------------------------------|

**Course Objectives:**

1. Covers the complete scope of the syllabus.
2. Bringing uniformity in the way course is conducted across different colleges.
3. Continuous assessment of the students.
4. Advanced Java is designed to develop web based, network centric, Enterprise level applications

**Course Outcomes:**

1. To Learn database Programming using Java
2. Understand and Create dynamic web pages using Servlets and JSP.
3. Work with basics of framework to develop secure web applications

**Guidelines:**

**Operating Environment :**

- **Operating system:** Linux
- **Editor:** Anylinux based editor like vi, gedit and Use of IDE – Eclipse etc.
- **Compiler :** javac
- **Database :** postgresql

**Submission :**

Each assignment will be assessed on a scale of 0 to 5 as indicated below.

- |                     |   |
|---------------------|---|
| ▪ Not done          | 0 |
| ▪ Incomplete        | 1 |
| ▪ Late Complete     | 2 |
| ▪ Needs improvement | 3 |
| ▪ Complete          | 4 |
| ▪ Well Done         | 5 |

**Assessment :**

Easy : All exercises are compulsory.

Medium : All exercises are compulsory.

**List of Assignments:**

**Assignment 1 : Database Programming [Slot-2]**

Study the Collection framework in java.

To Implement various Interfaces and classes through algorithms.

To Demonstrate Cursor Objects (Enumeration, Iterator, ListIterator, Comparator)

**Assignment 2 : Multithreading [Slot-2]**

To create and use threads in java.  
To demonstrate multithreading using Thread Synchronization, Inter-thread .  
Communication, Thread Priorities.

**Assignment 3 : Database Programming [Slot-2]**

To communicate with a database using java.  
To execute queries on tables.  
To obtain information about the database and tables.

**Assignment 4 : Servlets [Slot-2]**

To understand server-side programming.  
Simple steps to create and execute servlets.  
How to pass parameters using doGet and doPost methods.  
Handling data from HTML to servlet .  
How to connect servlet to a database .  
Use of various session tracking methods like Cookies.

**Assignment 5 : Java Server Pages [Slot-2]**

JSP life-cycle.  
Use of JSP implicit objects.  
JSP Directives.  
Use of Scripting Elements.  
To understand actiontags in JSP.  
Understanding flow of JSP custom tags.

**Assignment 6 : Spring Framework [Slot-2]**

To create and understand the steps to develop Spring application.

**Project Guidelines:**

- Students should work in a team of minimum 3 and maximum 4 students.
- Students can choose a project topic and implement the same using any language/technology covered in the curriculum so far. The operating environment must be linux.
- The student group will work independently throughout the project work including: problem identification, information searching, literature study, design and analysis, implementation, testing, and the final reporting.
- Project guide must conduct project presentations (minimum 2) to monitor the progress of the project groups.
- At the end of the project, the group should prepare a report which should conform to international academic standards. The report should follow the style in academic journals and books, with clear elements such as: abstract, background, aim, design and implementation, testing, conclusion and full references, Tables and figures should be numbered and referenced to in the report.
- The final project presentation with demonstration (UE) will be evaluated by the project guide (appointed by the college) and one external examiner (appointed by the University).

**Recommended Documentation contents:**

**Abstract**

**Introduction**

- motivation
- problem statement
- purpose/objective and goals
- literature survey
- project scope and limitations

**System analysis**

- Existing systems
- scope and limitations of existing systems
- project perspective, features
- stakeholders
- Requirement analysis - Functional requirements, performance requirements, security requirements etc.

**System Design**

- Design constraints
- System Model: Using OOSE
- Data Model
- User interfaces

**Implementation details**

- Software/hardware specifications

### **Outputs and Reports Testing**

- Test Plan, Black Box Testing or Data Validation Test Cases, White Box Testing or Functional Validation Test cases and results

### **Conclusion and Recommendations**

### **Future Scope**

### **Bibliography and References**

## **Project Related Assignments**

### **Guidelines:**

- The project assignments are a compulsory part of the project course and should be carried out by each project group.
- Project assignments are to be given by the guide for continuous internal evaluation.
- The project assignments are to be allotted to each group separately by the project guide on the basis of the implementation technology. A suggested list of assignments is given below.
  1. Project Time management: plan (schedule table), Gantt chart, Roles and responsibilities, data collection, Implementation
  2. Simple assignments to evaluate choice of technology
  3. Assignments on UI elements in chosen technology
  4. Assignments on User interfaces in the project
  5. Assignments on event handling in chosen technology
  6. Assignments on Data handling in chosen technology
  7. Online and offline connectivity
  8. Report generation
  9. Deployment considerations
  10. Test cases
- Each student within the group must work actively and contribute to the assignments, project work and report writing.

### **Evaluation guidelines:**
